Thread: [Free Certificate Spoofer | Web-Based | EmptyServices](#)

latencyx - November 2, 2024, 8:53 am

Hello everyone,

I am here to launch a small signature forgery system, made in a few hours, the goal is just to make your .exe file more authentic, It's simple and practical, if you have your file protected and want to add a fake certificate, it's a good option to make it more credible in the eyes of lay users.

The link is in the topic -> Empty Services, (<https://empty.ngrok.io/>) go to the spoofer files tab

If you have any questions, please contact me, do not buy/sell here.

latencyx - December 6, 2024, 3:07 pm

Hello dear users,

Lately I think you all can see that I've been a bit absent or busy, the reason for this is that I've been working on several updates to the clients and public tools, and as you can imagine it's hard to do all of this and make REFUDS.

Well, I've been working on improving the .LNK which as I said before will only be for members with [.REG or .VBS] subscriptions, this video I have as a demonstration is of a STUB that I'm building for a client, I'm trying to leave something similar for users who have an active subscription with the choice of icon etc.

.LNK "EXPLOIT"

[Video: <https://www.youtube.com/watch?v=Z2EKhE9wb5I>]

If you have any questions, please contact me, I will respond as soon as possible.

Will it still show a smart screen warning and work in gmail and is undetectable by Chrome?

You will not get a real certificate, this is just a visual forgery, so it will not change any detections or anything like that.

Levcaf - December 8, 2024, 7:41 pm

I didn't get a working file back.. hmm

latencyx - December 9, 2024, 9:10 am

The certificate spoofer does not interact with the original file code, it just adds a fake signature and sends it back.
