Thread: [Issues in Exposing BeEF Hook with Ngrok, Serveo, and Playit.gg No Page Changes](#)

SIM-5186353 - November 5, 2024, 8:26 am

Hello,

I have a problem trying to expose my BeEF hook and actually see the intended changes on the page. Here is what is happening:

Ngrok: Works at the start; then, at about 4000 requests, it drops, and beyond that, I was not able to view changes on a page with a continuous hook. I want the tunnel to stay open longer and the changes visible consistently.

Serveo: Serveo also cuts off periodically, and once more, changes made on the pages are not viewed with the hook.

Playit.gg: While playit.gg allows me to create the tunnel, I am not seeing any visible changes on the page whenever I actually use modules like BeEF's deface feature.

Has anyone else faced similar issues where changes are not reflected on the page? Alternatively, does anyone have suggestions of more reliable options without these limitations? I would appreciate every advice or shared experience!

Free services, including all those mentioned, have anti-abuse monitoring built in. You may have to spend money.
