Thread: [PHISHING TELEGRAM | DANGEROUS TOOLS](#)

x0d3 - November 14, 2024, 1:24 pm

This tool will help you manage all Session information when users log in. And you can do what you want like the image I captured on my screen.

- 1: Display friends list
- 2: Display message list (can text and delete in real time)
- 3: Change information (Name, Status, username)
- 4: Change 2FA (Change level 2 password without old password)
- 5: Create Groups and Channels
- 6: Join the group and channel you want
- 7: Download videos and images from other groups
- 8: Get the username or user UID from another group
- 9: Add or export contacts from a signed in account
- 10: Send mass messages to contacts without being blocked
- 11: Increase the emotion of posts on the channel

This is the version that saves the User Session when the user logs into App Mini. You can create one or more small applications to trick them into logging in without being blocked by Telegram. I will change the language to English.

Demo: [i. ibb.co/LdHHgLV/Screenshot-2024-11-15-042255.png](https://i.ibb.co/LdHHgLV/Screenshot-2024-11-15-042255.png)

At least try putting some effort into the fake demo page, if you gonna post it lol.. It is obvious that you just downloaded a template, and changes the objects/texts to make it somewhat realistic lol.
