Thread: [Need help to disable Windows Defender](#)

somenormalguy - November 22, 2024, 10:04 am

I found a way to gain command execution access without getting detected by Windows Defender, but now I want to upload something like advanced RAT and execute it. Unfortunately, WD will detect it as soon as it has been uploaded.

how can I disable Windows Defender using command execution?

So you have remote desktop access. Is it an administrator account? Obfuscation/crypting is Malware 101.

(Nov 22, 2024 11:30 AM)somenormalguy Wrote: [\[CITE\]](#) yeah I think its administrator account And you've never been introduced to the Set-MpPreference PowerShell cmdlet? Of course with desktop access, you can simply go into the WD settings. I don't know why this is difficult.

You can just click on the Actions drop-down and click 'Allow.'

this is what I'm talking about. I don't know how to say...just take a look into it

tried Set-MpPreference but that also didn't work
Another oddball Google services side-channel RAT.

I never accept "didn't work." That is the most unhelpful explanation. Did you try clicking on Allow or going into the Windows Defender settings?
