Thread: [easy dos + easy down a website](#)

darkosel - November 25, 2024, 10:34 am

down any website easy ?

use vps browser for more power

put target web and click start attack button

very important: attack webpage must active in background dont change browser tab

if you active other tab in browser the attack stops

online tool: [deleted]

(Nov 25, 2024 12:04 PM)Rubia Wrote: [\[CITE\]](#) It's just one HTML page that you host on GitHub fetching the target URL in a loop. In this situation the sentence "down any website easy" is complete bullshit.

you can see source it,s strong js dos script you can test this power it,s send very strong GET request and can down medium websites easy

DramaKing - November 25, 2024, 12:58 pm

Didn't you post this yesterday, and it will as deleted? And no, this will not even make a basic website unavailable. Not unless you have a fast fiber connection, a good browser, and the site has no DDoS protection.

Have you ever heard about DDoS protection? A free Cloudflare plan would stop this..

Spam Assassin - November 25, 2024, 4:11 pm

ITs better to curl with multiple threads, that will atleast slow down the servers at the best or force in

caching and if the site is at cloudflare free plan the catching will stop.

yeah.downed some websites by this script an shows cf error

DramaKing - November 28, 2024, 6:23 am

Uh-huh, sure. My phone only used 50-60 KB when using it. A DoS from one IP address is easily detected.

Use the Brave browser on your computer. It has tor network with thousands of IPs

And try getting more than 10 Mbps through Tor. Plus, Tor IPs will automatically be flagged by DDoS filters.

Captcha bypass is easy, open the website in browser first, pass through Captja after this open ddos page in browser put website and start attack

(Nov 26, 2024 10:01 AM)darkosel Wrote: [\[CITE\]](#) yeah.downed some websites by this script an shows cf error

Captcha bypass and some protiction is easy by browser dos method, open the website in browser first, pass through Captja after this open ddos page in browser put website and start attack

Hi friend,

do you know any program or online site what I do start ddos attacks?

If you have, i could buy it. :)

Thanks in advance,

BR

How can I make brother?
On linux or windows?
Or you have any recommended program?

Thanks in advance.
?????

LOIC is good program ?
LOIC is backdoored plus its ghastly old its not a good option.

IT is called DDOS a much larger amount of ips are going to one website. 1 computer cannot do damage.

Like if u have 60k bots its like 500KB

Why are you quoting me, why are you bringing up such an old thread, and why are you calling this DDOS when it isn't?
