Thread: [Silencio | Measure Noise Levels & Earn Rewards | DePin](#)

Cthulhu - November 28, 2024, 5:39 am

What is Silencio Network?

Silencio is a DePIN that uses Web3 technology to create the world's most comprehensive noise data network. By harnessing the power of community participation, Silencio rewards mobile users for capturing accurate, hyper-local sound data. The network already includes over 370,000 users across 180+ countries, collectively building a valuable global noise map. This data offers new insights for urban planning, real estate, hospitality, and creating quieter, healthier cities. As the world's largest decentralized noise monitoring network, Silencio is reimagining soundscapes, providing actionable insights for industries and fostering healthier, more livable urban environments.

How can I mine Silencio tokens?

Mining in-App Coins

Earn In-App Coins by measuring noise levels directly through the Silencio app on iOS and Android. Once downloaded, users can start noise measurement sessions, explore new hexagons, and check into venues. Each activity, from logging measurements to discovering new areas, contributes to their Coin earnings.
