Thread: [Rotating Proxies Compatable with qBitTorrent](#)

Glossy2k - November 29, 2024, 2:13 pm

Hey all, I currently have Radarr, Jackett, qBitTorrent and plex running a media system for me and some family memebers, so we basically use Jackett to index (which uses SOCK5 rotating proxies), but I also need some proxies for qBitTorrent, but when I try to use some from webshare.io for example, they don't work very well and reject the tracers and DHT nodes. Anyone have any suggestions?

Sorry, no, but I have to ask how Plex likes being behind a proxy.

And what's the need for rotating proxies? I imagine that would cause torrenting issues from regularly reestablishing connections.

So plex doesn't sit behind the proxy, I am ultimately looking to proxy all of the traffic for qBitTorrent as a pose to anything else.
