Thread: [Make \\$33K/mo | Start a Real Proxy Business | | Private Coded Kit | GoLang | | Vouched](#)

Spam Assassin - December 5, 2024, 11:47 pm

Ever wanted to start your own Proxy Business? or Tired of Purchasing Proxies over and over for high Price?

This is an original business using which you can earn real money without any effort! Just sell your subscription. The standard package monthly maintenance cost is just \$37/mo and no other investment is required. Unlike E-Books and other business where you need to put your efforts into working into it, you just advertise and sell and nothing else. There is no much tech stuff needed to know. Alongside, I will provide lifetime support without any questions asked in-regards of your clients.

Just to let you know before hand! You won't be buying any proxies, you can sell and even deploy your own API and have resellers on your system!

There is a lot of profit in the proxy business, just a small initial is required which is less then \$100 to deploy your first batch of Proxies with 20+ Million IP Pool. I guarantee you that you'll make your investment back within 1 week if you advertise / have a good account over forums / telegram channels and even keep the price low as \$100/week or \$1/GB

What this course will include?

Standard Mentorship IPv6 + Pool + Billing Panel - \$900 (one time) - Price may Increase

- IPv6 Proxy Pool Setup Kit - 20M-100M IP under \$45
- IPv6 Proxy Master Server Setup Kit - \$37 (Basic Servers to Host Your IP Pools)
- Mentorship on how to setup, troubleshoot and add IP of your subscribers etc.
- Billing Panel (One click installation and setup without any php knowledge)
- Standard Support (Reply within 2-6 Hours x 7 Days/Week)
- Telegram Channel Boost Included to LvL 20+ (600+ Premium Members Subscribing)

(Setup Kit are fully automated and you just need to type in the installation command and it be done)

Mentorship will be finished within 2-4 Hours (1 Day Training)

Premium Mentorship IPv6/IPv4 + Pool + Billing Panel + Telegram Group Setup + Ads - \$2400 (one time) - Price may Increase

- IPv4 Residential Proxy Pool Setup Kit - \$0.50/GB (Pool API with your Server)
- IPv4 Datacenter Proxy Pool Setup Kit - 100K-1M IP under \$400
- IPv4 Proxy Master Server Setup Kit - \$28 (Basic Server with 4 Core CPU)
- IPv6 Proxy Pool Setup Kit - 50M-500M IP under \$60
- IPv6 Proxy Master Server Setup Kit - \$28 (Basic Server with 4 Core CPU)
- Mentorship on how to setup, troubleshoot and add IP of your subscribers etc.
- Telegram Bot Setup for Telegram Sales
- Telegram Channel Boost Included to LvL 30+ (900+ Premium Members Subscribing)

- Grabbing/Scraping members from other proxy channels
- Premium Support - Reply within 30-60 Minutes x 7 Days / Week
- Billing Panel (One click installation and setup without any php knowledge)

(Setup Kit are fully automated and you just need to type in the installation command and it be done)

Mentorship will be finished within 1-2 Days (9+ Hours) as I can only give 4-6 Hours a day + Channel Setup / Boost and everything included.

[contract=tid]Start Contract[/contract]

Some FAQ asked by Users

Q - I wish to get the Premium Package after I get the Standard Package, is there an option to upgrade?

A - Yes, you can upgrade from Standard Package to Premium, you'll just need to pay the rest remaining price which makes up for the Premium.

Q - Oh I see. But the standard one doesn't include residential/datacenter setups. I would assume that! Is the kind of proxies that are good in the market?

- IPv6 Has its own market base. Before IPv6 came, the proxy market was expensive and due to IPv6, any target website where v6 is supported, IPv6 works just fine as it is. Most of the residential Proxies are also IPv6 (Mobile Proxies) and labeled as Mobile Proxies by sellers. Not everyone knows about this.

A - Our pre-setup kit provides you Residential GB at \$0.5/GB which you can easily resell at \$2-5/GB and if you setup our API, it will be fully automatic with your Billing.

Q - How much can I make from Sales of Standard package?

A - The cheapest market price for IPv6 Unlimited Bandwidth Proxies are at \$50/day and \$600/mo and with just \$37/mo you can hold upto 60 Users making you a whopping 36K each Month if you sell all of the 60 IPv6 Slots. That a 15 Thousand Times profit you made.

Q - How much can I made from from Sales of Premium Package?

A - IPv4 Proxies at Unlimited Bandwidth Pool will cost you \$7.8/day with 6000 Threads and using our Server Defusing Kit you'll be able to host 6 Users at 1000 Threads @ Unlimited Bandwidth. The current cheapest price for Unlimited Bandwidth IPv4 Package goes at \$280/day (1000Threads @ Unlimited Bandwidth) even if you check each and every sellers worldwide - 280/day is the cheapest. If you sell at \$190/day using the same specs, and sell the whole 6 slots, then you'll be able to make \$1140/day or \$34000/mo.

P,S, - After setup, the only thing is to sell your packages, and advertise as much as you want. The proxies running at the pace won't cost you anything except under \$100 for both setup v6 and v4 or \$50 each and you just need to print the money as on!

What is the cost per month for upkeep?

Spam Assassin - December 8, 2024, 10:11 am

(Dec 8, 2024 10:14 AM)SwimmingPool Wrote: [\[CITE\]](#) What is the cost per month for upkeep?
That be only server fees + \$3 for ipv6 Rotating Proxies! Server fee + \$7/day for datacenter Ipv4 Proxies! or server fee + botnet bandwidth leasing charge / month for ipv4 Residential Proxies!

Spam Assassin - December 10, 2024, 4:45 am

The cost of maintaining the standard package will be just \$40/mo and you can easily earn \$1k-5K a month from subscribers.

__M__ - December 14, 2024, 1:54 am

Even the price is high but I still want to know a few thing so maybe I will jump on this.

Basically what I understand you will provide billing panel and supplier information.

I think you will not teach how to get those millions proxy our own, maybe I have to buy them from other providers, am I right? If yes then how many supplier information will you give us? and where we can get more supplier? I dont think any one can run a business depends on just 1-2 supplier.

Spam Assassin - December 15, 2024, 3:36 am

You are mistaken, you'll get Billing Panel, Information on Supplier, and Lease those Millions of IPs for 1 Year at just the cost of \$50 and the Setup Kit coded in GoLang using which you'll be able to

setup the leased IP ranges as an automatic rotating proxies.

There are a lot of suppliers who sell/resell for \$100-500 but there are only 2 Legit supplier who sells just the same IP ranges at \$50 where others sell for \$500 so you can guess who is the reseller here.

What you will get is - Buy your Own Ranges of IP (Lease for 1 Year) at just \$50/Year and then using our GoLang Setup Kit, you'll use those ranges with server using Bird to setup the proxy pools and then start selling your own rotating proxy plans with Unlimited Bandwidth.

Hope this answers your questions. This is basically very cheap, normally the price for 1 Month Unlimited Rotating Proxy cost \$1K-\$2K but at the price of the proxy itself, I am giving you the whole setup, you can basically make Unlimited pool, for \$500 you can make a 500M IP pool. for 1K you can do a 1Billion IP Pool. And this price is just limited as I want to get some vouch at this price, once people know that they can setup a legit business, that will be my end for advertising with the vouches and he price will go as original at \$8.5K/full setup + mentorship.

rhnd112 - December 16, 2024, 4:37 pm

goooodd veryyyyyyyyyyyyyyyyyyyyyyy

Spam Assassin - December 18, 2024, 11:38 am

Add me over Telegram and do not forget to provide your HF username if you wish to join in this program and start your own business. The price is just for a two setups, once it goes, I am not willing to take in more, because this sale I am doing just to get a bit of extra cash for Christmas/NewYear gifts for the children over Orphanage I support. xoxo

It's a business setup and not a tutorial I provided for free, idk why you posted this, are you looking to purchase the setup and Starr your own business?

Spam Assassin - December 28, 2024, 4:07 am

(Dec 28, 2024 05:00 AM)Fictional Wrote: [\[CITE\]](#) If I understand this correctly, this is for only rotating? I do not see any info about static residential IPs, I would be interested in info of ip ranges for static ones if you can provide information about it.

I would highly advise an audit before giving a vouch like this, this is amateur hour. The user is advertising setting up panels in one click etc, have you verified that there are no backdoors in place? Any user purchasing something that is set up for you should be careful.

Yes I have made a video on the setup. Static IP setup is useless as it cost a single server everytime a static IP is setup. Will cost atleast a 256MB VPS to host a static meaning \$2.5 / mo on a static server so I don't do that. And there are free available gits over internet to make static proxies

(Dec 28, 2024 05:00 AM)Fictional Wrote: [\[CITE\]](#) If I understand this correctly, this is for only rotating? I do not see any info about static residential IPs, I would be interested in info of ip ranges for static ones if you can provide information about it.

The one click install is because all the coding is written in a script and you just put the golang script in and install it's dependencies and run the script to let it auto setup. I first did it for a company but as I own the source so I am selling it as well.

Spam Assassin - December 28, 2024, 6:14 am

(Dec 28, 2024 05:29 AM)Fictional Wrote: [\[CITE\]](#) ISP ip-ranges as static IPs are well worth it for the business I run, I know how to setup a static proxy. I do not need information about that, I want the holy grail of ip-ranges untapped as static IPs. I am willing to pay a lot if you hold this information.

That would still require an audit on both the panel that uses the dependent libraries and the dependencies.

Well I can code it on go for you, if you are okay with an encrypted version of it, or if you will pay a company based price (you know how much or I assume you understand it's in 5 digit offer) then I'll provide you an uncensored copy of it.

Spam Assassin - December 28, 2024, 10:21 am

(Dec 28, 2024 10:58 AM)Fictional Wrote: [\[CITE\]](#) What exactly is encrypted, I am completely unsure what you are talking about. You can not distribute encrypted files that are what I presume executables, if you said obfuscated files I would understand as obfuscated BINs are executable, is that what you mean?

But regardless of that I do not think we are on the same page, I am not looking for hosting help. I need someone with the connections/access to ISP subnets to host residential static proxies on those ip-ranges for static ips. This can be done by leasing from ISPs directly, buying subnets (super expensive) or botnets that have backdoors to IoT-devices or permission from the owner for a stable static connection.

My encrypted I mean the source will be compiled and licensed. So it can't be copied/read. Just as a php script is encrypted by ioncube and require ioncube to decipher the source and run it by the server, it will be done the same. Using OAuth or any encryption method I desire to encrypt the source so it can't be reversed or resold. As I told I can do residential proxies as well, it will require a private pool, I don't sell my pool but I do provide API access to my pool at a price if they are looking for residential proxies hosted from mobile/tablets/etc.

Incuse someone has leased a subnet and routed to a personal registered ASN or leased ASN

(which goes for couple of hundred dollars each) then it automatically becomes residential which can be done as I explained in the lthread.

If you are actually serious then DM me your budget and how you want things to go on! I'll make it happen/done!

Spam Assassin - December 28, 2024, 11:28 am

(Dec 28, 2024 12:21 PM)Fictional Wrote: [\[CITE\]](#) You think ionCube can't be reversed? I have knowledge in RE and since ionCube decodes in runtime you can just dump the memory to get the decoded partitions, anything encoded needs to be decoded to run. Its just super time-consuming of course, but nothing is impossible.

I do not want to run your encoded source as I can not validate or audit it, I can write everything myself to host the proxies. However if your pool can be ran as static and the uptime is good enough I am willing to buy the API access to host them myself.

I'll PM to probe more info.

I just gave an example. And ION cube just encodes php. Secondly as you are so sure on reversing the codes I am really feeling it hard to deal with you. And yes you can lease my pool but it be expensive. I can set the pool on one our servers with full access to it without any IP auth / user pass auth. You can code a server to connect to our server and use the pool from it. Make user:pass auth if you wish or directly as you want on your choice.

DM me the info!

Spam Assassin - December 28, 2024, 8:38 pm

FAQ on modification of the Source

The source I'm selling is Fully at your hands, once you pay you can modify the script, it's fully raw and is coded in golang. You can easily just modify it to your standards as well.

For the source itself I was paid \$18K in July 2024 and after that I own the source and I made the money off my time now I am selling it to 2-3 users who wish to start their business on this platform at cheap price.

I'm moving to AI development so soon this will be a backstory for me so before I leave it, I want it to be on some good hands. Maybe after two or three years, they sell it or release the source, giving credit to me is not required as I have made enough from this already

Also, I have provided a video to two of good and old HF users who have abit knowledge of everything. It's not much effort required. I made it such as simple that even a 12 year old could've used it without any issues. It's pure raw without any encryption. And golang is an easy and new

language, you can hire a dev at \$10/20 or learn it yourself and modify it like just a HTML5 site.

So far just been purchasing everything he was telling me to purchase so far to get this setup. Hopefully I can finish this set up soon to start earning

Okay so far, been trying to get a hold of him. His replies on telegram are very delayed. He said he had a power outage all day yesterday, so couldn't get any work done. So far just been purchasing everything he was telling me to purchase so far to get this setup. Hopefully I can finish this set up soon to start earning

vc00a - March 2, 2025, 7:14 pm

He hasn't delivered anything to me so far except the v4 with issues, and it also stopped working. As for the v6, he hasn't delivered it to me, and he only responds late with excuses, giving me a time frame and promising to complete it by then. I also discovered that he is a reseller and doesn't own any pool himself — he only resells 711proxy and others, activating the service for a few hours then removing the activation. I do not recommend dealing with him, and I have all the proof that he is a scammer.

Also, my friend bought a 10Gbit server from him for \$10K. It worked for a few minutes at high speed, then he applied a limit, and after that, the proxy server stopped working. He then disappeared and stopped responding to my friend. I also have the evidence and proof. He was selling a service from 711proxy, making people believe he owns a botnet and IPs, but he's nothing but a scammer. Don't be fooled by his smooth talk — he just knows how to talk.

Red-Baron - March 3, 2025, 1:55 am

Bought v4 and v6.

Its the same here, he didn't delivered anything and finding excuses over and over again. Messages very delayed. Had to buy some stuff but nothing more since then. Only thing I received is his 'Code' but cannot really get started with it. So far I cannot tell if he's a scammer or not. But it's definitely not as promised finished within 1-2 days. It's 2 weeks now. As of now he still seems legit..he definitely must deliver soon!

Edit: He responded to me. Let's see if situation gets resolved.

Edit2: We now setup ipv6 and a basic billing portal. Merge of auto selling still outstanding but we

are on track

luffy - March 3, 2025, 4:28 am

To add my experience, upwards of a month now, had to renew a bunch of services with 0 progress made.

WCisBroken - March 3, 2025, 6:34 am

I would like to update my experience once again, and at this point, I deeply regret closing the dispute with him.

I purchased the premium IPv6 and IPv4 package three weeks ago. Last week, on February 25, I was able to complete (or maybe not, based on what I've discussed with other buyers who requested different actions from him) the IPv6 installation. That was the reason why I closed the dispute with him, hoping that he would become active again and we could finally complete the entire setup.

At that moment, I regretted opening the dispute, so I created an ebook for the IPv6 installation (which, according to him, is not finished because there are missing commands) so he could send it to other buyers and save time on some explanations.

Since that February 25, I've been asking him what I need to start the process of installing the IPv4 proxies, and I haven't received a response regarding the installation process or what I need.

UPDATE:

He has responded. Waiting to see if he is going to resolve the situation

UPDATE 2:

I've waited once again, but I don't have any more time today. I've told him to send me the setup video and the full list of what's needed for the IPv4 installation. I also asked him to tell me which commands are supposedly missing for the IPv6 setup.

If everything goes well, I should have it by tomorrow.

UPDATE 3

He did not forward a setup video and the full list of things needed for IPv4. As today I have no idea how to setup IPv4 by myself. If someone from the staff wants my chatlog.

If you're going to make a deal with this guy, be prepared to beg for your order and hear a thousand excuses. His product might be real, I don't doubt that, but as a ""mentorship"", it's terrible, and he definitely doesn't meet deadlines.

Stay as far away as possible. I've asked for a refund, but honestly, I consider the money lost

UPDATE 4

As I feared, he's not offering any kind of refund, and the money is lost.

I showed him that in his main post, he claims the mentorship will be completed in 2 days, but he hid behind the excuse that subnets take time to set up. The reality is that I have open tickets proving that in less than a day (in my case, 2 days because of another issue), they were ready.

So, between purchases and everything else, the entire setup should have taken about 5 days max.

The thing is, I made my purchase on February 11, and on February 25, the IPv6 installation was done—but only because I opened the dispute (and like an idiot, I closed it, thinking things would change).

And after all the updates I've been making, he finally offered to install IPv4, but he didn't keep his promise.

First, he told me he would be available in half an hour and sent me Anydesk access. Then, he said he couldn't do it, and later he asked me for access to one of my VPSs so he could do the installation himself.

But I don't want that—I want what I asked for, which was a video and a list of the necessary commands. He didn't do that and just kept hiding behind asking for my VPS access.

When you have even a minimal tech background, you can easily create a mockup for any type of documentation.

I'm tired. Maybe if I gave him access to my VPS, he would actually complete the installation. But I already gave him access to two other VPSs before February 25 for the IPv6 setup, and he didn't even log in until I opened the dispute.

He even lied to me, claiming I was the only user who didn't have it installed. Meanwhile, I'm in contact with other buyers who, according to OP, are against the TOS.

I have all the chat logs for any staff members interested in them. I've also made multiple copies throughout our conversation in case he deletes or modifies anything.

? If you open a dispute against him, DO NOT close it early without receiving everything, hoping he will change.

It's the same story over and over again. But there's a valuable lesson behind this: always use an escrow service.

If you're looking for a "non-mentorship," you're in the right place

r6socks - March 7, 2025, 5:45 pm

he took another 450 usd and no settings on my server provided .
total i paid 2440 usd initially and 450 usd plus
he gave no response other than collecting money and promises .

Healasuk - March 14, 2025, 1:49 am

Sad to see this happening but I haven't heard from OP since March 10th on telegram. Paid him for the ipv6 mentorship and same thing that Wcisbroken posted where his response time was super slow with little to no mentorship involved. Essentially most of the "mentorship" i received was "Buy this and that and enter this and that". I really hope him being MIA since March 10th doesnt mean we all got scammed, but hoping he has a explanation when he hopefully/eventually comes back

Healasuk - March 18, 2025, 2:15 pm

I think by now its safe to say OP was probably stringing along as many people as he could before he pulled a exit scam. Still no response from OP

r6socks - March 19, 2025, 4:56 pm

no progress, maybe he has scammed many people like me just by his attractive words. he also did not reply to messages. i lost 2800 usd

Healasuk - March 19, 2025, 9:48 pm

The worst part is I even told him my current situation where I was let go of my job due to "restructuring" and that money was extremely tight, but would use part of my funds to invest in this proxy business he stated I could do with little to no experience.

Red-Baron - March 20, 2025, 4:55 am

Definitely an exit scam. Lost all money. No response since over a week.

WCisBroken - March 24, 2025, 5:04 am

I sent him a bait message from another Telegram account, and he's still active (just not in this forum, at least). So I encourage people to open a dispute against him and get him banned. I can't do it because I closed mine because I was an idiot. There's no hope.

r6socks - March 25, 2025, 5:17 pm

stop working with him, before you lose more money
he provided IP: 154.197.56.23 and enticed me to buy more capacity
but in fact after i investigated he is reselling 711proxy.com.
he doesn't have any pool, and can't prove he owns the pool,
his configuration is very basic haproxy.

maybe he will block me after i post this and there will be no refund. however in honesty i have to speak up

it took 2 months and he ended up being a scammer, we were fools when he said sweet words.

update : He took someone's message chat with him and explained that i'm just a reseller of 711proxy . and said i can't buy these kind of ips . i will continue to have an investigation on 711proxy to see how much usd he actually paid for these socks5 ? . also i asked for proof by uploading an html file to the server : 154.197.56.23 but it seems impossible for him
i guess he doesn't own this server

Healasuk - March 27, 2025, 10:19 pm

This is very unfortunate to see/hear. OP took advantage of the fact I was desperately looking for another source of income, due to me losing my irl office job. I literally told him Id be giving him part of my severance (emergency fund) to pay for this mentorship. He was re-assuring me the whole time, and once he got my money, he became less responsive.

he is a scammer

be careful, luckily i didn't get scammed out of another 510 usdt for making money
