Thread: [PDF EXPLOIT /LNK/REG/DOC/](#)

dmoreki81 - December 6, 2024, 3:58 am

Hello Guys,

I have written different programs that can be used as exploit to gain access, but I got to understand that some of the exploits like PDF, acts as a carrier while others can't upload via email server.

Now here is my simple question, which can be embedded into a PDF Dropper that will not trigger when downloaded via Chrome or Edge. Because during downloading, Chrome always sends a warning message, likewise Edge.

Secondly, Files like Reg, when downloaded shows a UAC warning when run. (Warning! Do you trust this program). Is there a way this can be Bypassed?

Thirdly, I have noticed that DOC files can no longer work as exploit as VBA is being flagged by most antivirus and Windows defender.

Fourthly, Is there a better way that PDF can act directly when run to execute a program at the background using either CMD or Powershell that will work on browsers as well as most people are moving away from reader apps and using browsers to view pdf files. If it's not possible, which will you suggest as the best method for PDF exploit via browser.

I am here to learn and open to new ideas. Your suggestions and advise will go a long way in reshaping my thinking method and enhancing my coding skills

Thanks [warn]
