Cookies are provided, and I was able to log in easily with Dolphin Anty. The account also has high comment Karma which is harder to obtain and is the main metric to prevent spammers in many subreddits these days. One downside is the account has a generic/generated name, but the amount of comment karma makes up for it. Will be purchasing in the future. Thank you!

I am just gona use it to post on a specfic sub reddit. Is that fine? Like nowadays subreddits requires karma and shit.

Months ago some guy used an aged account to help me post and it ended up getting banned lol.

Don't know how this works now. I need to use RDP/proxies to match the location of the account?
