Thread: [best way to analyze connections?](#)

mukpikd - December 15, 2024, 1:40 pm

what is best way to analyze what connections a process external make when running?

Bastille - December 15, 2024, 6:39 pm

There are many tools, less or more advanced :

- Process Explorer / Procmon / Process Hacker
- Fiddler
- Wireshark

Some options are more "trivial / user-friendly" such as :

- Glasswire (Windows)
- Safing Portmaster (Windows / Linux) : <https://safing.io/>

A list of great tools above but I would also like to include tcpdump if you're on Linux.

Network connections, right? Easiest way is running netstat. There's also TCPView. Doing a memory dump is unnecessary but an option.
