Elevate Your Remote Management Experience with Onimai

Are you ready to transform the way you manage your enterprise systems? Onimai is the most advanced Remote Administration Tool designed to meet all your remote management needs with unparalleled efficiency and security.

Key Features:

? FUD Scantime, UD Runtime: Access and control remote desktops with ease without getting flagged by pesky antiviruses such as Windows Defender, Kaspersky and Avast.

? Remote Tasks: Run tasks remotely without touching your keyboard and mouse ever again! You can run tasks on any client when they disconnect, reconnect, on a timer, ect. These tasks include In-Memory Remote Execution and CMD Prompt commands for seamless automation.

? Remote Desktop & HVNC: Seamlessly access and control remote desktops with high visual network computing, providing a smooth and responsive user experience.

? File Manager: Effortlessly manage and transfer files between systems with our intuitive file manager interface.

? Remote Shell: Execute commands and scripts remotely with ease using our powerful remote shell functionality.

? Custom Stub Builder: Our innovative stub builder ensures a seamless experience by eliminating virus flags across all antivirus software, ensuring smooth and uninterrupted operations.

? Custom Stub Code: Customize your stub with our batch stub code builder, adding your own code to execute before the initial stub, running any bypasses or grabbers you would like.

? AMSI & ETW Bypass: Bypass Antimalware Scan Interface and Event Tracing for Windows effortlessly, ensuring your administrative tasks remain discreet and uninterrupted.

? Custom UAC Bypass: Forget about admin prompts. Our custom-coded User Account Control bypass allows you to access client systems without any interruptions.

? Hardware Sandbox FUD & Anti-Sandbox Tools: Keep prying eyes at bay with our fully undetectable (FUD) tools and anti-sandbox features, ensuring your remote administrative activities remain private and secure.

? Windows 10 & Windows 11 Support: Fully compatible with the latest Windows operating systems, ensuring broad compatibility and future-proofing your investment.

? Diskless Operation: Maintain complete control over remote systems without writing to the disk, ensuring no traces are left behind and enhancing operational security.

? Zero Footprint: Leave no footprint on the target system, providing the highest level of stealth and security for your remote operations.

? ..And many more!!!

@mrthunker

Is there any respected member who will vouch for you ?

If not, you can give 1-2 vouch copies for test.

Otherwise its just wasting time and \$\$ and smell fishy

chefsauce1231 - December 24, 2024, 3:56 pm

anyone tried it? i wanna know

Microlab - December 25, 2024, 9:38 pm

If you need someone as vouch, i'm here.

The RAT is decent, but don't set your expectations too high—it's essentially Quasar with HVNC, built-in crypter and modified R77 rootkit. It has potential, but it could really shine with more unique and innovative features. The UI, while functional, could benefit from a more creative and polished design to stand out among similar tools. That said, everything works as expected, and despite encountering several bugs, Mr. Thunker is quick to address and resolve them, which is commendable. One of the standout aspects is how easy it is to update the tool. Thanks to its server-sided structure, even minor updates to the stub are straightforward as building a new payload, making it user-friendly and efficient to maintain. Overall, it's a solid RAT with room for improvement, especially in terms of features and aesthetics.
