I need fresh tiktok downloads along with fresh tiktok account creations with my referral code.

Using bluestacks or LD player will not work, needs to be like a real acting iphone/android.

Find a developer who can clone the app properly for you, so that each instance is seen as a new device on the side of TikTok. There are a some parameters that need to be unique in each instance, and the clone apps in the app store will not be sufficient. Use the clones in combination with a multi location 4g proxy, and you should be good to go.
