Thread: [VPN that open ports automatically to RATs?!](#)

aerohacker - December 17, 2024, 6:02 am

There's a VPN with port forwarding support that open all the ports automatically to RATs?!

When I say automatically, I mean I didn't even have to type the RATs ports.

I used it IPJetable and they did itm but they end their activities.

If a VPN client could automatically forward ports, how would it know to only forward the ports for your RAT? That would also shred any stitch of legitimacy the VPN provider had.

Always best to setup your own spend 5.00-10.00 get a vps and manually open the ports your need. Follow [This Thread](#) to complete your needed setup.

Hey mate, I hope you are doing well. Please look at the OSVPN solution, which offers Port forwarding without a limit on Ports. We also provide 24*7 Tech Support for quick assistance through our Website & Telegram.

No VPN will automatically port forward for you. Get a vps and manually port forward, or skip port forwarding and use tor.

TheG3ntlemanX - January 11, 2025, 1:24 pm

I think there was a VPN mullad vpn I never used it anyway you can try ...

Automatic port forwarding from the rat.

Now that firstly sounds rediculous but a very simple solution for rats sellers to make up sales rather

than support forwarding ports on other VPNS. Rat sellers should sell VPN's, its like almost 95% profit even with a small VPS that's got a dedicated IP and automatically forward the port for them... Easy job, extra money and less supporting of VPN's you make nothing from.

Where some laugh others can see a solution.

Im sure I can arrange this with certain rat providers. Listen on the port triggers call to server to forward port. Easy work.

Rat with built in VPN and automatic port forwarding. Meh its childsplay could even rotate the IP and use DDNS, purchasing a domain or subdomain from within the rat itself. Rat would sell itself.

@-Nightingale-@ let's work this on my new loader.

get rdp better ?

Eagle404 - January 16, 2025, 5:06 pm

Buy Dedicated IP from Ovpn/dot/com and Open port.. To be sure ur bot stay online on ur RAT if any problem happening with ur IP provider use DDNS..

Or Buy VPS and create OpenVPN files and Open Port Manually.

Have a good day.

Are you meaning Tor network allow automatically all ports ?

I'm Using a VM Windows connected to a Whonix Gateway.
On the Windows VM i have put a VPN with port forwarding, work perfectly.
Use dynamicdns like no-ip to never loose ur connections.

DramaKing - February 27, 2025, 11:12 am

That would be insecure without locking down a host-based firewall. However, you can expose ports to Tor and tunnel traffic through NAT without forwarding ports on a router.

No-IP is anything but bulletproof. Those connections will be lost when your account is banned.
