Thread: [\[VB6\] Simple Shell booter \[SOURCE ! \]](#)

ToXiiC - August 22, 2010, 6:40 am

READ THIS WHOLE THING TRUST ME

Ok so I noticed some people have been working on shell booters in vb6. I have a made a source that currently has 18 working shells. The shells arent that great because there free ones i found on HF. Bad part about this is that you can only use those simple shells that have the black bacground and green texts saying SHELL at the top. Ones coded by EXE are not suported. But with 18 hitting 1 IP its great for Xbox Live. I just tested it and I have hit 4 halo games so far. When hitting only hit the ips that you are sending the least amount of packets to on Cain. Those go out super easily. If you hit one with alot of packets you will just hit the host of the game and make it super laggy. So ye heres a pic and the source.

(Since i put some time into this and im releasing it can some people please send me some good private shells that hit hard but not the ones coded by exe only the simple looking ones)

k but also if ur gonna test on xbox i will tell u know i just booted for the 5th time and it took like 4 rehits to get the kid out. It easily puts people redbar but the shells are getting weaker. So ye just thought i would let you know that before u expect them to got out in like 2 sec. If you have ur own shells i could help u add them via teamviewer if u dont know how.

michaelmhmhmh - August 22, 2010, 8:29 am

Vouch for him he helped me set it up! 900 post biotches haha

mikkel5250 - August 22, 2010, 9:37 am

downloaded it... buyt i need vb6 first.. i had it before until my other comp got stolen. so im looking for at new link for vb6

Moof - August 22, 2010, 10:10 am

Instead of making new webbrowsers, you can:

Code Dim Pewpew1 As New WebBrowser

Dim Pewpew2 As New WebBrowser

Tate - August 22, 2010, 10:10 am

It's the exact same concept as a VB.net one.

Ironsides - August 22, 2010, 1:20 pm

I used on myself, nothing happens...

Also does it work on someone with same IP with using his LAN IP?

ToXiiC - August 22, 2010, 4:58 pm

(Aug 22, 2010 01:20 PM)Barathrum Wrote: [\[CITE\]](#) I used on myself, nothing happens...

ye dude trust me it works but you have got to relies that this thread has like 150 veiws so alot of people have already been trying it. When i first made this before i released it i could hit someone on xbox so easily. No im lucky if i get them yellow bar. The shells in the booter are bad now =\ if u have some shells of ur own ur best bet would be to add them to the booter.

NRG4FR - August 22, 2010, 5:33 pm

For the WebBrowser4 code; shouldn't you change:

[...] & "submit=Go"

to?

[...] & "&submit=Go"

ToXiiC - August 22, 2010, 5:37 pm

(Aug 22, 2010 05:33 PM)NRG4FR Wrote: [\[CITE\]](#) For the WebBrowser4 code; shouldn't you change:

[...] & "submit=Go"

to?

[...] & "&submit=Go"

No because the link that webbrowser 4 goes to is a little different and requirs Submit=go or something at the end of the link. Idk i was rushing through i only made this post to help people get an idea of a vb6 shell booter but u can change and add more things to it if ur a better coder. Feel free to build off this.

Ironsides - August 22, 2010, 11:58 pm

So I see, I'll credit you, and make a VB.Net, maybe add some extra stuff aswell.

ToXiiC - August 23, 2010, 5:56 pm

k thanks also i think i might get into vb.net so when u get that done can u pm a source download link that would be great

Gone-KaPPaH - August 27, 2010, 9:06 pm

Nice post TeH Pro

thanks

Mr.GoD - August 31, 2010, 1:18 pm

Great source and nice booter thanks.

nacker - September 4, 2010, 9:39 am

Is it posible to compile this source and that compiled program uses external file as a source for shells? Like compiled.exe shells.txt and when i want to add new shell i add it into shells.txt instead of compiling it again and again. I ask that cause i dont use VB or any coding app. You must admit that my idea is good.

ToXiiC - September 4, 2010, 12:32 pm

use VB or any coding app. You must admit that my idea is good.

i have already thought of that and yes that is a very good idea and would be really good. But that might be something to code in .net its most likely possible in vb6 but i cant see how i could do it. It would take some researching

nacker - September 4, 2010, 1:21 pm

Than HF coders here my call. Hellp this guy to improve his booter. We will all have benefit from it in near future. Good luck TeH Pro I believe in you and you deserve HF_coders tag. Regards.

wow thank you. i applied for the hf coders group weeks ago and still i havent gotten a reply =[

autorunman22 - February 1, 2011, 11:26 am

What is the function of shell in shell booter? Im noob.

#Realtalk. - March 24, 2012, 6:12 am

how do i use this? please help me, i really wants to make my own shell booter but i cannot find an .exe in the files

Billiam - March 24, 2012, 6:51 am

Hmm I downloaded it but it has Loads of errors in vb for me....

#Realtalk. - March 24, 2012, 1:08 pm

how do i make this into a .exe? please tell me

-simon

Percocet - March 24, 2012, 2:00 pm

Just a quick tip, using a shell booter in VB, NEVER use webbrowsers. Always use webrequests. It will run MUCH smoother.

msw3006 - April 29, 2015, 4:51 pm

I need help setting it up

ToXiiC - April 30, 2015, 2:02 am
