Thread: [Unam Silent Crypto Miner doesnt works on new Windows version](#)

ryanregazo - December 19, 2024, 5:57 pm

Hello, the Unam Silent Crypto Miner 3.4.1 doesnt work on the new Windows version 24H2. Is it an error?

alcinzal - December 19, 2024, 6:24 pm

Can you describe the problem more in-depth? Does the builder run? Can you build the miner? Does the miner just close or does it run but nothing is happening? Are you sure it's not Windows Defender or other antivirus programs that closes it? Does it not mine CPU nor GPU, or is it just one of them that doesn't work?

ryanregazo - December 20, 2024, 1:28 am

I can build it, the issue is when I execute the builded file on my second PC (updated to the latest version of Windows 24H2), it doesnt start mining. It have exclusions. The miner goes to the startup folder but nothing happens.

This crypto miners actually work???

ChrisDubai - January 1, 2025, 4:03 am

Did you solve your problem ?

Dop4mineLogs - March 1, 2025, 1:51 am

The main issue breaking the miner seems to be process injection. I noticed that Unam Crypto Miner uses an unsigned driver, which might be responsible for the injection. Windows 11 24H2 has patched the usage of unsigned drivers, even if you allow Vulnerable Drivers through Windows Settings or Registry. The best would be downgrading to 23H2.

Please correct me if im wrong.

You are wrong.

Windows 24H2 - 24H4 broke all public RunPE codes which is not done by a driver but merely usermode code.

Depends, assuming Monero mining with 1000 bots each having 2 kh/s you will get 75\$ per day.
