Thread: [Domani - DEXTF low cap huge potential](#)

CBHF - December 20, 2024, 4:24 pm

The Deutsche Bank (DBK) and Memento Blockchain have been very open about the L2 ethereum based coin they plan on implementing, also known as "Project Dama", there are a few potentialities on what that coin could be, Based on speculation from some folks on X, a couple of KOL's have claimed that DEXTF may be the project that they have been working on, DEXTF (Domani) is supposedly going to be a big player in the RWA (Real world assets) space and the market cap is sitting at only \$20,000,000 at the moment. Currently the only exchanges with the coin are MEXC, uniswap, and a couple of others that have a lower trade volume.

Very interested to see where this goes, especially with the backing of these large corporations

They are currently partnered with DBK, ZKsync, axelar, and many more

https://x.com/htwtech_/status/1869773051702759486

Currently vested a small bag to see where it goes, currently sitting at about .23 with a 20 Mil cap

Let me know your thoughts

That CMC link doesn't seem to work.

I found this: <https://www.coingecko.com/en/coins/dextf>
