Thread: [Looking to remove safety features off Llama AI models](#)

odin-loki - December 20, 2024, 8:57 pm

Hello,

I use Llama AI models and I am looking for someone who can remove the safety features off all Llama models. I am using Llama 3.3 but will be upgrading to Llama 4 in the future and so on after that. I want ALL the safety features removed.

I am willing to pay \$1000 Australian dollars cash or swap for an idea I had where an AI is based off a Cell Learning research paper and its 100,000 times faster than a neural network. It can train on a terabyte of data in a day on a 3 teraflop gpu. I havent tested it or trained it yet but. I am sure it works. Or possibly both.

Seller will have to send me a video showing me the python script and training data files. At least them in the file directory.

I am looking for a fast and complete solution to all Llama AIs. I am hoping your awnser is future proof.

I am going to be using the AI for defence contracting.

If Llama Guard is separate, then it's simple. If the guardrails are part of the deep neural network, then it's impossible to remove them.
