Thread: [Best ways to spread RAT without crypter.](#)

**EKhjirijma** - December 28, 2024, 4:02 pm

Hi! So i'm looking for the best ways to spread my RAT (Quasar RAT) without a crypter.

I don't have a crypter so it is more difficult to spread if almost all antiviruses detect it.

If you have one way to spread that can work or a crypter please tell me. Thank you!

I heard if you upload your file to <https://www.hybrid-analysis.com/>  
They'll run it no matter what. Could be good for your first infection.

Even with a crypter, thats basically impossible. Quasar is old and open source, and it is rarely updated, so most antiviruses will recognise it not only by its signature but by its behaviour. If you want undetectable, code your own, or have someone else do it.

**DramaKing** - December 28, 2024, 10:27 pm

Sure, you just have to convince victims to allow it.

If you upload the .exe file everywhere, you may get clients. Computers without AV software are more common than you think.

Cheats. They are by default detected

Also don't use Quasar. Super basic functionality at least try Pulsar
