Thread: [\[NEW SECURE, PRIVATE RAT\] Developing a normal + tor Rat | What features should I add?](#)

Slyn - December 29, 2024, 11:03 pm

Seeing the current remote access scene I feel like there is a significant gap in the market, all tools I've seen are seemingly mediocre, and often overpriced. I haven't seen a well coded rat since orcus, so I want to make one. Whilst I am new in this forum, I have coded a fair few rats for legitimate personal use, so I'm fairly experienced in the area.

I am going to make a rat that is capable of handling tor and clearnet clients. The server will be written in C#, and the client in C++.

What features would you guys like to see added? Note that some features will be exclusive to clearnet clients due to constraints in tor.

And what is a price point that you would be willing to pay? If I go ahead with this, I will charge repeating monthly or yearly fees to ensure that server costs dont eat away at me over time.

Note that I will be operating within legal boundaries in this project.

I need rat that allows browser + any extension control

Control apps

Hvnc + hidden rdp

Voidlight - February 6, 2025, 9:14 am

mbr persistence, xmr miner, credential recovery, hidden service creator, built in crypter

p1u70wr13 - February 6, 2025, 9:44 pm

Leaving comment for vouch copy when you finish building.

Com Puer - December 3, 2025, 3:15 am

still is under development ??

qwerty25 - December 3, 2025, 11:41 am

need rat troian that can stole facebook cookies from any device ios / android. please contact me if you can do that

cltrade - December 3, 2025, 3:25 pm

email client recovery
