Hi all. I would like to hear your opinion about telegram doxxers. How do you feel about them and what do you think about them? Are they capable of anything or are they just really good at intimidating?

There is no way to avoid them. Personally i've built some doxxers for telegram by request of clients . This is used for marketing, or who knows..?

I built a script that can find your username / FN around the internet . Is a process of searching , but automated , the script look up all the info you provide about X name.

I.E : search for HF , the script will search around the search engines that "HF" prompt
