I am looking to do a few things in a game that has no anti-cheat. It is a very early MMO.

I would also like to get involved in the project.

Send details in PM.

Sent a convo/message to above. Still looking for this. This will be a good opportunity for anyone experienced with game cheats.

I will guarantee for a good cheat/exploit at least \$1,000.

You might have luck with simple memory edits or packet manipulation tools for early MMOs without anti-cheat.
