In this thread, I'll reserve it for: How i work, some examples, etc. It will be edited through time.

This is an example of token (banknote with serial number). I use it on daily basis for proof between 2 persons. If you are familiar with ZK (Zero Knowledge), this is a real life ZK. There are no 2 banknotes with same serial number, that's why is best for proof between 2 persons.

The images you embedded are being flagged by Avast AV. Consider putting them on Imgur instead. Good luck with your service.

Since my English is not very good, I could not understand the subject fully. What exactly is this? Like exchanging our cryptocurrency for cash dollars at your workplace without kyc?

spinder - January 10, 2025, 4:17 pm

so i we meet up in real life i send you crypto and you hand cash?

Correct

Not exactly. I can't exchange on sight in countries where I don't have an office. Only at cities (countries) where i have an office, i can exchange on sight.

In countries where i don't have an office, I work via courier system. You send usdt upfront and courier deliver cash or you come to courier.
