Thread: [AI / LLM - Making friends & Talking in foreign languages](#)

Hackers - January 8, 2025, 7:20 pm

I have been talking with a user on HF in English, and he is translating to French. Sometimes I send in French after having ChatGPT (chat.openai.com) translate from English for me. If he sends in French then I can convert to English easily!

You get it.

I am so happy about modern LLM / AI technology for these types of reasons. It's going to be a whole new world when everyone can talk, work, and transact in any language. I see a future where there are many more auto-translate apps built-in to our social networks, apps, and websites, so that we can talk to people from any place, in any language. Eventually the world will develop language models that are able to use local dialects, slang, and also preserve the tone & personality of the person sending or saying the message, much better than what we have today.

EXAMPLES:

N ka fo ke ka korise fila don HF la angile ke, o fo Faranse lo. Bi kelen kelen ne fo Faranse ka ChatGPT (chat.openai.com) fe senben angile kan f? ne ma. Mogo o fe Faranse fo, ne be a ta angile ka taasa fa!

I ni na.

Ne be fila bee d? modern LLM / AI teknoloji yere la. Kene yere jaman na ni mogo fila bee yere yeleman, tegeman, ni sarakala ka taasa fa. Ne be yere kunu fe, mogo bee d? auto-translate apps been ni yere social networks, apps, ni websites la, mogo bee yeleman ka mogo fila yere ke, kene yere kan. N tunini ka jaman na ne, mogo bee na language models ke, ni s?r? yere fe local dialects, slang, ni mogo f? a senew ka mogo f? yere k?nd?ya ni cek?r?ya ban a waati ma

J'ai discuté avec un utilisateur sur HF en anglais, et il traduit en français. Parfois, j'envoie des messages en français après avoir utilisé ChatGPT (chat.openai.com) pour traduire depuis l'anglais. S'il m'envoie des messages en français, je peux facilement les convertir en anglais !

Vous comprenez.

Je suis tellement enthousiaste à propos de la technologie moderne des modèles de langage/IA pour ces raisons. Cela va être un tout nouveau monde lorsque tout le monde pourra parler, travailler et échanger dans n'importe quelle langue. J'imagine un futur où il y aura beaucoup plus d'applications de traduction automatique intégrées à nos réseaux sociaux, applications et sites web, afin que nous puissions communiquer avec des gens de partout, dans n'importe quelle langue. Finalement, le monde développera des modèles linguistiques capables d'utiliser les dialectes

locaux, l'argot et de préserver également le ton et la personnalité de la personne qui envoie ou dit le message, bien mieux que ce que nous avons aujourd'hui.

Ich habe mit einem Nutzer auf HF auf Englisch gesprochen, und er übersetzt ins Französische. Manchmal sende ich auf Französisch, nachdem ich ChatGPT (chat.openai.com) verwendet habe, um aus dem Englischen zu übersetzen. Wenn er auf Französisch schreibt, kann ich es leicht ins Englische umwandeln!

Du verstehst, was ich meine.

Ich bin so begeistert von moderner LLM-/KI-Technologie aus genau solchen Gründen. Es wird eine völlig neue Welt sein, wenn jeder in jeder Sprache sprechen, arbeiten und interagieren kann. Ich sehe eine Zukunft, in der es viel mehr automatische Übersetzungs-Apps gibt, die in unsere sozialen Netzwerke, Apps und Websites integriert sind, sodass wir mit Menschen aus jedem Ort und in jeder Sprache kommunizieren können. Schließlich wird die Welt Sprachmodelle entwickeln, die in der Lage sind, lokale Dialekte, Slang und auch den Ton und die Persönlichkeit des Absenders viel besser zu bewahren, als es heute der Fall ist.

He estado hablando con un usuario en HF en inglés, y él está traduciendo al francés. A veces envío mensajes en francés después de usar ChatGPT (chat.openai.com) para traducirlos desde el inglés. Si él envía en francés, puedo convertirlo fácilmente al inglés.

¡Lo entiendes!

Estoy tan feliz con la tecnología moderna de LLM/IA por este tipo de razones. Va a ser un mundo completamente nuevo cuando todos puedan hablar, trabajar y realizar transacciones en cualquier

idioma. Veo un futuro donde habrá muchas más aplicaciones de traducción automática integradas en nuestras redes sociales, aplicaciones y sitios web, para que podamos hablar con personas de cualquier lugar y en cualquier idioma. Eventualmente, el mundo desarrollará modelos de lenguaje que puedan usar dialectos locales, jerga, y también preservar el tono y la personalidad de la persona que envía o dice el mensaje, mucho mejor de lo que tenemos hoy en día.

Yes, it's really great. There are people living all over the world who speak different languages but thanks to ChatGPT we will no longer have to worry about making friends, partners and businesses in every corner of the world.

Exactly! I'm excited and hope that more and more people learn about GPT and other similar apps so they can do the same

Dskcompressor - January 8, 2025, 7:36 pm
Anyone who discovers him for the first time will fall under his spell because he is very practical and quick to answer all your questions. it's really great ?

Bastille - January 8, 2025, 9:48 pm
I also use it sometimes when I need to develop my ideas otherwise I could be limited by my english level,

It's very very useful and there are a lot of projects around this "translation" feature, such as glasses with earbuds that translates the language during a conversasion, that could be really useful during holidays / trips in a foreigner country,

Or other glasses (AI powered) that display on the screen what someone says to you (this case is mainly for deaf people, imagine being able to read on a display what people are saying to you even if you can't hear them, amazing)

Can chatgpt translate better than google translator?

Bastille - January 8, 2025, 11:13 pm

Definitely, it understands everything like even slang language and so on

Hmmm, I'll have to take a better look at chatgpt then for translations.

7 - January 8, 2025, 11:19 pm

So we can create a telegram overlay adding addition encryption.

No surely this is possible. If it can translate almost instantly it can also encrypt and decrypt with a PGP key or even with a rolling encryption

yes, definitely take a look. I love localizing it for the person's "version" of a language.

For example, Mexican Spanish is extremely different from Spanish in Spain. Or Spanish in another part of South America. They use different adjectives, formal vs informal words, etc.

I think you could do that, but you may be better off just doing standard encrypt/decrypt than having it run through GPT for this.

However, there could definitely be something interesting here where the natural language is changed - if the exact input/output is less important, then sending in English and having it written in Arabic, then encrypted, and then sent ---> then on the other side, they receive it, decrypt it, translate from Arabic to another lang, and then the user reads it.

This could be interesting for making things slightly harder to track and crack as the input/output would never match on either side of the encryption for the initial message, or received message. GPT would change some wording on it along the way during the translation process.

Maybe I misunderstood your post though, LMK.

I did take a look at this and I think its an excellent translator.

That's awesome - at first it was a bit more hit or miss, but it definitely improved over the last year or so.
