Thread: [Windows Defender bypass](#)

_SyncX404 - January 9, 2025, 10:47 pm

Hello, I'm looking for crypter that would be able to bypass windows defender.

I'm using BitRat and it get detected by windows defender easily.

Also, even if I run BitRat as administrator (on VM) it doesn't add itself as exclusion to windows defender, so after PC restart it get's removed.

The only way it stays on was when I manually added it to windows defender exclusion. It's injected in System32 i think (not sure tho) so it requires restart for removal. But yeah, I want it to stay even after restarts.

Have you thought of using a dropper?

Horus_Protector - January 10, 2025, 10:10 am

Hello, I invite you to try my crypter, I give you a sample as a test

Let me know if you're looking for something a little more advanced than basic cryptography and if your spreading method can be paired with steganography.

Huge difference. Steg is when you hide a hidden message and/or communicate some form of idea, concept, or communication that is hidden via the picture with embedded data within a picture. For instance, steganography works with pixels by subtly altering their color values to encode hidden information. This is often done in ways that are imperceptible to the human eye. There are many different types of steg but for your purposes you would use file system steg in order to maintain persistence via your stub. This is more-so of a spreading method though. Encryption on the other hand is complex process that involves scrambling of relevant content. For instance, in this scenario, the encrypted message is obvious to anyone who intercepts it, though its content is incomprehensible without the decryption key. This same concept can also be applied to steg. Once you understand the intricacies you can put a spin on it in order to trick windows defender by obfuscating your stub and accompanying files that may incidentally set off windows defender.

Damn, but how much would that cost? the steganography

I will, thanks. I mean I won't buy anything from people that don't have good reputation here on HF

:)

a smaller tool for initial access so you can drop larger and louder malware on a client

Phantom_Services - February 10, 2025, 10:24 am

You could use our Crypter. Its compatible and bypasses Windows Defender without Problems :)

FireByte - February 20, 2025, 5:04 pm

I need crypter for warzone

Does your BitRAT cracked version?!

NR3RAZOR - April 30, 2025, 5:13 am

Were you able to find a crypter on-site that can bypass WD? Thanks in advance.
