Thread: [Video of drone swarm in New Jersey](#)

Hackers - January 11, 2025, 5:52 pm

What do you think of this one?

Seems pretty in line with certain behaviors I've seen too

https://mega.nz/file/gn0B1Jyb#20A_3trG3MA0nzw39MQnTa-b1cH3SyrHwglSk_6TEvc

Is this the same fleet of like the other drones we seen previously at New Jersey?

what do you think of this video:

[Video: <https://youtu.be/Jr6150YDofs?si=QAf2uOWW7r45Tjyl>]

Jamika - January 11, 2025, 8:52 pm

Why dont anyone take a pic or video which show them clearly? All videos are from far away

XtremeDiscount - January 11, 2025, 8:52 pm

wow crazy how they can't get down to the bottom of this

F4tDoinkz - January 11, 2025, 8:54 pm

That looks pretty wild lol.

I have 100s, they're incredibly hard to focus because of the lights on them. They also do like to come in groups, but not always directly overheard

I could have 8 of them come in a fleet and the chances of anything looking like more than blinking lights on my phone are small.

I know some people are using thermal cameras, FLIR, And others to get Better clips

There are thousands of clips out there though, some closer, some further. Ultimately the behavior of them can still be observed even at a distance

I can't watch video right now but I'll say that yes, I've personally seen the same behaviors in other states, and also out of US in Antigua too

Rsynced - January 12, 2025, 6:19 am

Its like all starting to get the same redundancy.

Hackers - January 12, 2025, 6:25 am

(Jan 12, 2025 07:19 AM)Rsyncd Wrote: [\[CITE\]](#) Its like all starting to get the same redundancy. Yep, I would say that's accurate - I think I know what you mean. The behaviors, drone models, etc are matching across thousands of videos.

I don't really record the drones anymore unless I think the video I can record is better than others I already have. It's redundant to keep recording the same behaviors over and over again.

I do still need to go through all of mine, edit out the clips

I think what many don't realize is that for every video, you can imagine that the person recording was outside in the cold willing to stare at the sky because they knew they saw something strange.

For example in my 10 second clip of a sphere hovering in the blue sky, I had 2 minutes of recording before it where the thing wouldn't focus on my camera and you just hear me complaining. Before that we watched it for a few minutes, for a total of let's say 7 minutes - with a 10 second video recording to prove it.

In my area it's so hard to record the drones

Light pollution + bad camera + distance = shitty videos, even though we can see clearly in person.

For example, in person you can make out lights and their location on the craft. In a video it becomes a blur where you often can't make out the lights, and just see a glob of flickers.

For anyone recording on phone:
I recommend not auto focusing

It is better to not even zoom at times - zoom on your computer after, not while recording. Auto focus fucks things up majorly

Hero - January 12, 2025, 6:28 am

Germany has also approved the Bundeswehr to shoot down drones over critical infrastructure. Shit's getting serious.

I have a feeling they will not be successful at shooting them down, but let me know if you hear anything else about this.

RootRXXT - January 12, 2025, 10:15 am

ooo no... more Ariens

Hackers - January 12, 2025, 10:38 am

Wouldn't say aliens, but unknown aircraft of pretty large sizes, with some that display anomalous behaviors

Komando28 - January 13, 2025, 7:30 am

It is certainly interesting

Hackers - January 13, 2025, 7:32 am

Yes, but now consider the following:

- this happens almost every night around here
- not just in New Jersey

HkrPkr - January 13, 2025, 7:59 am

Didn't the cybertruck dude go off about how the drones are some crazy anti grav tech lol

Hackers - January 13, 2025, 8:09 am

Yeah, I've heard this.

I mean, that part is likely not wrong for anti-grav. I don't know if it's ran by the government though. The reason being is that if it was Russia, they would use this tech in Ukraine. If it was China, I doubt they would do this all over the world, tempting every nation to attack. And for the same reason, I do not believe it is the USA. I would actually even go on a limb and say that it's more likely to be a small country that nobody suspects than it is to be a large 1st world nation. However, I would also go on another limb and say it's more likely to be a covert program within a 1st world country than it is to be a 3rd world country making a breakthrough. Either way, I don't think it is the public facing governments of Russia, China, USA, or similar.

There is a huge misconception that this is only affecting New Jersey, and people are blissfully unaware of what's going on in the skies around the planet right now....

So yeah, he was definitely on the right track. The aircraft I've personally seen (with my eyes, in person - not just on video) are only able to do the maneuvers they can do if they have anti-grav or another form of field around the craft.

- The reason is that for the speed I've seen them travel... they stop without any sort of slow down period. This sudden stop would completely obliterate any metal airplane or drone we can make. The only way to not be destroyed when stopping & starting like that is with a field around the craft.

- So yeah, I do believe that we are seeing anti-grav or gravity-negating technology in action. I don't know who is running them, but they are running!

This part: "they stop without any sort of slow down period. This sudden stop would completely obliterate any metal airplane or drone we can make."

Is very exciting. :-)

Yes, this is definitely one of the observables we've seen, and the reason I'm so excited. The instantaneous start/stop with 0 acceleration/deceleration time from what we can observe is ridiculously advanced.

The other part that people look over is how much energy is required to perfectly suspend a craft of these sizes, in the wind, for hours... It takes a lot of energy to not move with gusts of wind, not even an inch - and at such a high altitude, rain or shine - clouds or blue sky - it's almost unbelievable if I hadn't seen it myself so many times. It's clearly using either a different form of flight, or gravity manipulation, or some sort of advanced energy tech. The output to perfectly suspend itself, with no visible exhaust, and no visible wings. With no visible fans, thrusters, and a completely silent overall flight most of the time... It just doesn't exist in public tech sector.

If it's not a manned craft, that would make sense here, BUT a true field around the craft could possibly make gravity almost irrelevant for anyone inside. If for example it acts more like a pocket of air / space, and particles move around the craft rather than the craft pushing through the particles, then the craft would essentially negate gravity, and have its own force(s). These forces, or self sustained gravity would need to be manipulated to push the craft in certain directions. Another answer to all this could be less exciting - manipulations of light to create full 3D illusions globally. Or, there is laser technology, as well as suspended plasma - which can be morphed into various shapes and essentially levitated. There are a lot of possibilities when you explore frequencies, various reactions, radiation, vibrations, and different forms of energy. Who knows what they've created.
