Thank you, sir! Very nice v9 a9... Everything I believe is in except for some of the computer graphics. Some wires and cables still visible at the end. Very nice... :)

JMobiLe - April 2, 2009, 3:58 pm

True, true. you might still see some microphones hanging around or other shit cuz this vid is not fully completed. But still looks good.

You can say that this is a spoiler type in dvd quality.

Jackhole3 - April 2, 2009, 5:06 pm

Its actually a very good movie in my opinion...I just burnt this to DVD..gonna sell it in school lol...:)

FataLogiC - April 2, 2009, 5:51 pm

how do you find these anyway? (not google.. is it?) or is it "if you know, you know; if you dont, you dont.."

edit: never mind.. looks like google does the job

so is this whats going to be in the theaters because i heard this version doesn't have the special effects. or does it i just been lied to?

JMobiLe - April 3, 2009, 4:28 pm

This version is just a Workprint which means its not officially completed to in editing. So this will show some effects that are computerized still and some wires from the set.

But its the idea of what the film is gonna look like without the complete special effects.

And yes, Google is my friend where I catch leaked popular films.

I just downloaded it and watched it. No question the best movie this year. It was a little funny seeing it with missing special effects and still seeing the cables, but it in no way took away from the action. I loved watching the X-Men cartoon when I was young, and this movie is starting to fill in all the character, you didn't see in the previous movies. Gambit, and juggernaut along with most from the first movies just younger, there was probably more characters I missed because I was caught up in the movie, and they didn't say who they were, but you could tell by there abilities. I ussally hate it when they make a second and third part to a movie, but they could make another 100 X-Men movies and I would still watch. The .avi was file was kind of big, 1gb and took little longer then most movies to DL, but well worth the wait. Definite Must Watch! If you have trouble with that DL link or want to watch it streaming go here:

I found it on there and was going to post it but JMobile beat me to it by 20 mins, no big deal as long as someone put it up from everyone to know it's out there, plus it's perfect digital, no handy cam job, A+ for a movie that doesn't come out for 3 week. What more can I say then you have to watch it, as soon as you can, you wont be disappointed.

Thanks SdotPro, I try to post best quality movies as I too hate Cam versions. lol

i downloaded this off piratebay about a 3 days ago. not a bad film, would of been good with the effects though. I'd wait for the proper one people.

btw peeps thanks for sharing some of them links, come in handy.

Im downloading it now. Im so put it on a disc and selling.

Dia?ond - April 9, 2009, 1:52 am

This is a pretty BA movie but the version I watched was wierd it showed like the green screen and stuff in it.

koolkid - April 9, 2009, 5:24 pm

are you sure this is not the leak version????

JMobile - April 10, 2009, 2:21 pm

This is the leaked version, its a "Workprint", not finalized.
