Thread: [Is it possible to buy Google Data Analytics certificate ?](#)

JNath - January 11, 2025, 11:22 pm

I was wondering if it's possible to buy Google Data Analytics certificate under my name and if yes then how much would be the cost of it.

Jamika - January 12, 2025, 12:52 am

If nothing new changed , i think yes , will cost u about 250 usd if iam not wrong

No, you have to do the course at coursera. But it's free iirc. The certificate itself might cost a fee, like \$30 or so. And you can google the questions.#

Also the course is rather low quality imo. The certificate is essentially worthless.

Very prevalent in the corporate IT market right now.

Even low level certifications can be required to be considered for opportunities like internships or jobs. Many enterprises will require you to undergo vendor product training and certification before being issued credentials into those systems.

What about getting a degree or a license? Like taking a state board exam in your name?
