Thread: [Android ADB Scanner ~ Find Bots Globally ~ Auto APK Uploader ~ Complete Package ~](#)

Foxy Proxies Ltd - January 17, 2025, 10:36 am

[Video: <https://www.youtube.com/watch?v=CB24bVxvl3k>]

Are you ready to take your Android device management to the next level? Our cutting-edge Android ADB Scanner and Mass Uploader Package offers unparalleled speed, precision, and efficiency for those who need powerful tools to scan and manage Android devices at scale.

Key Features of the ADB Scanner:

High-Speed Scanning via Multi-Threading:

Scan at lightning-fast speeds, maximizing efficiency and reducing wait times.

Multi-Server and VM Compatibility:

Deploy across dedicated servers or virtual machine environments for unmatched scalability.

Country-Specific ISP IP Scanning:

Target IP ranges in CIDR format for precise and country-specific scans.

Detailed Device Identification:

The scanner identifies open Android ADB ports (port 5555) and provides exact device details, ensuring accuracy.

Root Access Capability:

In many cases, the scanner allows you to obtain root access to discovered devices, enabling advanced management.

Mass Uploader: Streamline Your APK Deployments

Once the scanner has identified devices, our Mass Uploader comes into play:

Bulk Import of Devices:

Seamlessly load the device list found by the scanner.

APK Bulk Upload and Installation:

Drag and drop your APK into the directory, and the uploader handles the rest—uploading, installing, and activating your APKs across all listed devices.

Automated Process:

Eliminate manual effort with fully automated APK deployment.

System Requirements:

The scripts are compatible with Ubuntu and Debian-based Linux operating systems, ensuring

reliability and ease of use on widely available platforms.

Why Choose This Package?

Efficiency and Speed: Cut down on time spent on device discovery and APK deployment.

Professional-Grade Tools: Built for IT professionals, researchers, and developers who need robust and reliable solutions.

Comprehensive Capabilities: From scanning to deployment, this package covers every step of the process seamlessly.

This powerful toolkit is available for just \$600 USD (open to negotiations). Don't miss this opportunity to equip yourself with a premium solution that delivers results.

Note: This package is intended for legitimate and ethical use only. Please ensure compliance with all local laws and regulations when using this product.

Included in this package: The Android Scanner, the Mass APK Uploader, IP Ranges in CIDR format for every country in the world (so you don't have to manually find ip ranges in the correct format yourself), version 1 and version 2 of my Gold Code versions, and a text file detailing how to run the commands of both pieces of the software. Training on usage, best practice cases, and questions and answers are provided by me.

This looks really cool.

I remember talking to you about building this. I think this price is too low as it will become saturated very quick at this price.

Wish you good luck with sales but wish I hadn't of mentioned my plan at the same time.
But early bird catches the worm. Ill have to find a new way

It wasn't overly-complicated to make. Which is why I kept the pricing reasonable. And I mainly made this thread for you. LOL

you need to block scanning of government IP's and others related to security.
Hows the bruteforcing?

Foxy Proxies Ltd - January 17, 2025, 11:37 am

(Jan 17, 2025 12:26 PM)7 Wrote: [\[CITE\]](#) you need to block scanning of government IP's and others related to security.

How's the bruteforcing?

There is no need for bruteforcing because you can't beat the fingerprinting or trusted keys. So we use the thousands of devices that are already open. And if you know where the factories are....you can get your shit installed before the devices even leave the factories. The best factories to hit are in South Korea and Taiwan. Hit those up and you've got a gold mine because your shit will then get spread across the globe.

Just did a quick scan of Ukraine to see what was popping off there in a war zone. Just too many android devices waiting to be used there. But then again it's like this in most countries.

I find this really hard to believe. I found 899 open ports on Shodan. A number of them showed cloud-specific Linux kernels. One was an Internet gateway. Another was a Cobalt Strike Beacon.

Foxxxy Proxies Ltd - January 18, 2025, 1:09 pm

I can give you a live demonstration any time you'd like. And Shodan doesn't nearly list all possible countries and all possible ip ranges.

This is a live scan of Panama right now. Its a partial scan for the moment. Now if your familiar with how to access adb devices, go check and see if these devices are live, open, and you are able to upload any apk you'd like.

DramaKing - January 18, 2025, 8:32 pm

I checked two that are now offline before I found what appears to be a 'jailbroken' fire stick connected directly to the Internet or possibly ADB forwarded through NAT. Or it could be a honeypot. Leaving network debugging on is one thing. Wanting unauthenticated debugging across the Internet is another.

Foxy Proxies Ltd - January 18, 2025, 9:31 pm

You can't help but love a manufacturer's flaw. Leaving unauthenticated adb open is the fault of the manufacturer. But this flaw is present in devices all across the world. In just about every country you can find this exploit. Therefore, until manufacturer's close, fix, or otherwise do their jobs properly, this will continue to exist.

ohkthxbai - January 22, 2025, 8:30 pm

Very interesting, rather surprised that this hasn't been jumped on. If everything works as stated I am interested the scanner/apk uploader. Sent a pm with contact. Will update with how things go.

Foxy Proxies Ltd - January 22, 2025, 9:22 pm

Appreciated your business. Again, if you have any additional questions or need something new built into the uploader section for your specific apk's don't hesitate to let me know. In the meantime enjoy the product. :)

Foxy Proxies Ltd - January 25, 2025, 2:37 pm

Version 3 will be released today and contains the following technical updates:

- 1.) All installation messages for apk's are now sent to /dev/null to prevent message notifications on the end users screens.
- 2.) Auto-configured battery optimization for all apk installations (applies to both foreground and background running apps.)
- 3.) Add a logging mechanism to capture the output of each command and debug issues.
- 4.) Dynamic Arguments: Allow users to pass apk_location, package_name, and service_name as arguments.
- 5.) Updated the global cidr formatted ip ranges for all countries to exclude government, university, and military ip ranges.

Key Improvements for today: January 26, 2025

Root Handling:

Privileged commands (e.g., disabling package verification) only execute on rooted devices.

Silent root check (is_device_rooted) avoids permission errors on non-rooted devices.

Installation Reliability:

APK pushed to /data/local/tmp (writable on most devices).

Uses cmd package install with flags:

- r: Reinstall existing app
- t: Allow test packages
- g: Auto-grant permissions
- f: Force installation

Service Management:

Direct service control via am start-service (more reliable than monkey).

5 restart attempts with 2-second delays if service fails to start.

Error Mitigation:

set -eo pipefail enforces strict error checking.

Temporary APK cleanup even if installation fails.

Graceful exit on critical failures.

Rsynced - February 1, 2025, 1:51 pm

Great support and high quality manuals. This software is legend!

Foxxxy Proxies Ltd - February 7, 2025, 2:21 pm

I have now produced a walk-through video for this package. Enjoy the video:

[Video: <https://www.youtube.com/watch?v=CB24bVxvI3k>]

Foxxxy Proxies Ltd - February 11, 2025, 2:06 pm

New feature added: Upload more than 1 apk at a time.

If you have 2 or more apk's that you want to upload and install to the list of devices, you can now upload multiple at the same time.

Foxxxy Proxies Ltd - February 13, 2025, 12:51 pm

For those that want to know the countries with the highest results, let me know and I'll get that data over to you.

The Director - February 15, 2025, 4:32 am

Contacted you, waiting for a demo, thanks.

InspectorGadget - February 23, 2025, 12:52 pm

I'll give a vouch for this scanner.

I'll be fully honest too, it functionally works but is a little rough around the edges. OP is incredibly flexible and supportive. It's worth getting now if you have a use for it because once it's trimmed up and improved naturally over time, OP should raise the price.

For the price, you do need a use for it, it's not just for having a look. You could also have a go at making this yourself but if you don't want to spend days / weeks figuring this out and want something that just works and you can be sure of that, then get this scanner.

The uploader for the APK's is fine too, I've customized mine a great bit but for doing initial testing and confirming the apk is loaded, it works absolutely fine.

@OP thanks for dealing with my many messages, you're a great guy!

[DramaKing](#) Hopefully you'll take my word for it (and OP's video), this finds FAR more devices than Shodan or Censys. Not every hit is useful but it does the job.

Foxy Proxies Ltd - February 23, 2025, 3:18 pm

Thank you for your honest opinion. Since the time you bought it and played around with it, we've had some time to go over some modifications and some other enhancements. I've enjoyed you sharing the optimizations so far, and yes, in the newer version that I will be producing I will be including your recommendations. I originally coded it just to do the basic job. But your recommendations are very good and I'm working on implementing them asap.

Overall I'm glad you found it useful and attested that it indeed does work and produces far more results than shodan produces.

JuWacky - February 25, 2025, 10:42 am

Thank you for reminding me to turn off remote adb.

Foxy Proxies Ltd - February 27, 2025, 8:18 pm

(Feb 25, 2025 11:42 AM)JuWacky Wrote: [\[CITE\]](#) Thank you for reminding me to turn off remote adb. That should have never been on in the first place. :)

Foxy Proxies Ltd - March 3, 2025, 2:32 pm

New Improvements:

- One simplified command to run everything: `./automate.sh`
- Complete automation: 1 global ip text file that is continually read and scanned, and once androids are found, they are uploaded to automatically without human intervention.
- Fault tolerance: added a 4 minute timeout in the event the uploader gets stuck trying to write to an unwritable android. Will automatically disconnect if a timeout occurs on any upload and will reset the adb server and continue on to the next device in the list.

What this means: Set it & Forget it. It will run 24/7.

rr23 - March 10, 2025, 10:38 pm

If I know the member, yes.

Foxy Proxies Ltd - March 21, 2025, 3:15 pm

New additions based on customer requests:

- Automated exportation of proxied units to text file at the top of every hour (can be used to publish list publicly or privately)
- Automated vm (server) reboot every 24 hours (done to refresh memory - can be modified to reduce or increase reboot frequency)
- Re-worked how ip ranges are scanned - instead of from top to bottom now pulls random ranges based on logic and memory
