Thread: [WEF - The Future of Jobs Report 2025 - 2030 \(investments / stocks\)](#)

Bastille - January 22, 2025, 12:30 am

I came across a video in French discussing this very interesting report about the evolution of professions, concerns and interests of business leaders, particularly with the rise of AI, robotics, autonomous driving, etc.

I'm a beginner regarding investment / stocks, so I think I'll rely on it and hold until 2030 at least. I already bought some Tesla stocks, I'll probably go with :

- AI : Nvidia (I thought it was too late because of the hype, but it still something interesting at the horizon of 2030 because only big actors are playing with Nvidia GPU, and AI it's not widely used yet)
- Robots : Tesla
- Autonomous cars : Tesla
- Batteries : Tesla
- Big Data : Amazon, Datadog, IBM

Regarding the evolution of job, I think that I'll stick on my objective to work as a SOC Analyst, and then devote some time to integrate AI related knowledge. My job is not threatened for the time being based on this report, but is not on the top notch tho :

I'm also waiting for the 2025 magic quadrants from Gartner, especially :

- Endpoint protections
- Firewalls
- Cloud

I don't know the others, but I'll take a look at it.

Those domains / jobs will be the most impacted by the raise of AI and Robots :

The report is made of almost 300 pages, I cannot share every thing but I think it's worth reading it. By the way, you can upload the PDF file to your favorite AI agent and get some help to retrieve only the relevant information for you ...

Thank you for sharing a high quality post.

Your checkmarks on Tesla are why I hold mine. TSLA to \$1000 when they've met the challenges of self-driving cars. And also you didn't mention their solar division.

<https://www.tesla.com/solarpanels>

BigData is scary imho. Not sure AWS is the future of tech but maybe. I think if Bezos really wants

to launch AWS into the megasphere he starts doing acquisitions like Cloudflare for \$50B+.

You can start with small amounts such as 30-50\$ per month so you can get familiar with this field, however be aware that the investments are usually on mid / long term, don't expect quick benefits, but in case you need the money you're still free to withdraw it.
