Thread: [Custom Payloads - 100% FUD, Any Target, Any Security](#)

A N U N N A K I - January 22, 2025, 10:04 am

Hello everyone,

Looking for a reliable, fully undetectable payload? You've found the right place. Whether you're working with .NET executables, PowerShell scripts, ClickOnce, PE files, or even VBA—I've got you covered.

Here's the deal: NO dependencies. 100% FUD (Fully Undetectable). My payloads bypass everything, from consumer-grade antivirus to enterprise-level defenses. You don't need to worry about anything—just pick what you need, and I'll take care of the rest.

WHAT I OFFER:

Basic Encryption Payload – \$150

Need a simple, no-nonsense payload? This one's perfect. It's fully encrypted and undetectable with zero dependencies. Just drop it in, and you're good to go.

Stage 1 Loader (for remote shellcode) – \$170

Tired of EV certificates and nested archives? Forget all that. You'll get a regular .exe that bypasses SmartScreen, Windows Defender, and even browser warnings (including Chrome's direct download warning for .exe files). Nothing fancy, just works.

DLL Sideload – \$600

Want more stealth? Use this to sideload a .dll and bypass SmartScreen, browser warnings, and Windows Defender. Simply place the .exe and .dll in the same folder or bundle them in an SFX archive for smooth extraction after execution.

Signed .exe/MSI – \$850

The gold standard of stealth. This signed executable bypasses SmartScreen, antivirus signature checks, and is authentically signed. Perfect for when you need remote access without any hardware keys or extra security measures.

SUBSCRIPTIONS

DM me for information and price.

I provide subscriptions and full support for advanced EDRs like CrowdStrike, SentinelOne, or Sophos. This package includes custom solutions and support for high-security systems. Get access to everything, plus ongoing help to bypass anything that comes your way.

WHY YOU SHOULD TRUST ME?

Middleman/escrow accepted.

I've been doing this for years. My payloads are tested against the latest defenses, and they always get through. Whether it's Windows Defender, CrowdStrike, SentinelOne, or the latest enterprise-level security solutions, I know how to break through.

Got questions? Need something custom? Hit me up, and I'll set you up with exactly what you need. Whether you're just starting out or need a highly tailored solution for a target, I'm here to help.

Sticky Bot - January 22, 2025, 12:13 pm

Hi, I'm Sticky Bot. The owner of this thread has purchased a Paid Sticky. Hack Forums does not get involved in deals or deal disputes. We do not vouch for the product or the service offered by members. Please note that all deals are at your own risk. The sticky will expire on Feb 5, 2025. If you or a loved one are interested in buying a sticky please visit this page: [Buy Sticky](#). For more information about Paid Stickies you can read our [Help Doc](#).

Py_Dev - January 22, 2025, 12:50 pm

Very interested, will wait for a few sales to purchase.

DramaKing - January 23, 2025, 5:54 am

Do you have any vouches?

ANUNNAKI - January 23, 2025, 6:05 am

(Jan 23, 2025 06:54 AM)DramaKing Wrote: [\[CITE\]](#) Do you have any vouches?

I do not have any vouches at the moment, but we can arrange for a trusted middleman with a popularity of 1000 or above here on HF to ensure a smooth transaction. Let me know if you'd like to proceed with that.

Horus_Protector - January 24, 2025, 10:15 am

he refuses to provide proof or demonstration, unsafe product

ANUNNAKI - January 24, 2025, 10:26 am

(Jan 24, 2025 11:15 AM)Horus_Protector Wrote: [\[CITE\]](#) he refuses to provide proof or demonstration, unsafe product

Dear Horus,

I believe I have provided sufficient clarification on the matter. As previously mentioned, I have shared proof of installs on the same day, and as discussed on Telegram, we can use a middleman from HF for the transaction if needed.

Please note that the files I create normally do not operate within a sandbox or VM environment, and they will be closed when tools such as Process Hacker are used, as I have explained. I will not be creating a new file specifically to infect your VM, as this is not part of the standard procedure.

If there are any concerns regarding the safety of the product, I am more than willing to proceed with a middleman of your choice, provided they have at least 1000+ popularity, to ensure a secure and seamless exchange.

I kindly ask that we avoid reiterating this matter further, both here and on Telegram. Please understand that I will not be offering a free sample, nor will I be infecting your VM.

Thank you for your understanding.

Best regards,
A N U N N A K I

Horus_Protector - January 24, 2025, 10:38 am

No one asked for a free sample. All encryption service providers create a stub for public testing: a file designed to work for 5 minutes, just enough time to execute it and restart the system to verify persistence.

On your side, you only provide words as proof. Clients, however, need to see for themselves. Even with your own payload, it is possible to perform a test on a virtual machine.

The public stub serves as evidence that your product works. Yet, you refuse to provide a demonstration, likely because you use the same stub for everyone. This raises doubts: is your product truly functional?

A N U N N A K I - January 24, 2025, 10:42 am

As I have mentioned on multiple occasions, both here and on Telegram, I am open to using a middleman for the transaction if you prefer. That being said, I believe we have discussed this matter thoroughly, and I would like to avoid any further repetition.

I understand if you have decided not to proceed with the purchase, and I respect your decision. However, I will not be reiterating the same points again.

I agree with you, live proof is more reassuring than words.

Dear maurimaruia12

I understand your concerns, and I want to clarify that my willingness to use a middleman is not just words. I have already agreed to facilitate the transaction through a trusted middleman of your choice, provided they have a reputation of at least 1000+ popularity. People do not achieve 1000+ popularity here by scamming others.

Thank you for your understanding.

Best regards,
A N U N N A K I

This is defiantly a next level product your offering , enterprise level payloads are something i think all forums are lacking not just on a product level but on understanding in general GLWS i hope to see more posts on this and data on the success rate and runtime of payloads

I would heavily recommend listening to other comments and work on providing some sort of POC or example of some sort to ensure buyer confidence , as per the current climate of crypts you understand everyone's skepticism

I actually really hope its legit and we see some updates from you or clients soon !
