Thread: [Ubereats B4U 45-55% discounts \(CANADA ONLY \) - Quality niche service](#)

luffy - January 23, 2025, 3:27 pm

Welcome to Luffy's Canadian Uber Eats B4U Service

What is this service, and who is it for?

I can obtain ubereats orders at high quality discounted rates. There is no exact fixed amount, but savings range from 45-55% for you. There are some guidelines you must order within , but they are not aggressive and can be taken advantage of very easily.

This is not a standard B4U service, in the sense that I won't be taking on consistent new customers, instead I am developing a group of consistent customers who understand what this service is and use it to amplify their weekly eating. There is no channel on discord and a bot that takes you to ordering. The ordering is done 1 on 1 with me (no random foreign workers).

This service is currently only available in Canada for Canadian users (this is one of the few services available for Canadians, most are restricted to the US).

What do I get out of choosing your service?

- Unlike most services that take you to bots to order and availability is somewhat inconsistent, I will allow you (in fact expect you to) schedule your orders in advance of when you want to eat, to create a seamless experience for you
- I have been ordering like this for a while, and have a good sense of how to optimize the usage for your value. I will work on the backend to get you the most bang for your buck on your orders
- I take great pride in my customer service, I will be here to work with you on your orders, and any potential issues you might incur
- You can order to the same address as often as you want, no issues at all

Limitations on orders:

- Restaurants ONLY (No grocery, convenience or alcohol)
- No orders can be placed if the restaurant closes in under an hour
- No individual items above 27-29\$ (I can still get a discount on these , for example a\$60 steak or \$50 cake will still be cheaper if you purchase through me vs on your own ... but the most optimal deals are if you stay within the recommended range)
- 90% of restaurants are included. Some restaurants do not include themselves in Uber's promotional network. If you ever want to know if a restaurant is included you can shoot me a message. Most of them are.
- You CAN stack BOGO offers. (Examples of this: Burrito boyz has a BOGO on their chicken burritos. 4 Burritos run you ~\$17)

Accepted Payments:

- Crypto
- E-transfer

Is this completely legal? Absolutely. This is just a form of promotional arbitrage + intelligent stacking + some insider knowledge to get quality discounts on most orders. 100% legal as long as Uber continues to allow it.
