Thread: Free Uncensored High-res / HQ Images - AI Generated

Hackers - *January 29, 2025, 7:15 am*

If you want some AI-generated images then just reply with the prompt you want and I'll send you at least 1 photo.

Please be specific with style, etc.
I'll try my best to make it as perfect as possible.
It also allows sensitive topics like firearms, smoking, or other similar adult requests.

the most hypnotic, hypnotizing, groundbreaking optical illusion, that works hallucinating when you look at it in a total different parallel optical illusion artwork beyond the coming beyond any Advanced methods ever used. Thanks in advance

Well, if this is what you want, then this is what you will get. Be warned, you may find it hard to look away. I hope I have fulfilled your request.

I also made some lower-token artwork for you - MC Escher style artwork here for infinite looping illusions and pathways.
You can click & see higher res:

Nice attempt of generating my prompt..

No problem, let me know if you do have a better prompt you want to try. The problem with your last prompt is that it was very generalized and not specific, so it's hard to pick a good model for it, and hard for any LLM to know what exactly you want.

It's better to pick a style, a subject/focus, etc.

For example you could request an MC Escher, trippy black & white photo of the infinity sign lined with neural mappings and gold trim.
- That's specific and easier to work with than what you had requested.
- Let me know if you want a 2nd set of images

snaxemon - *February 2, 2025, 5:50 am*

Which model are these from?

Hackers - *February 2, 2025, 7:31 am*

(Feb 2, 2025 06:50 AM)snaxemon Wrote: *[CITE]* Which model are these from?

Mixed - I can add in whatever base model, embeddings, and other steps to modify the final output. For example I can add in filters for realistic, anime or cartoon style, artsy, etc. whatever you guys want.

I'll use a different model per prompt.

The first users prompt was so tough because it was too general, but also brought in tough concepts like illusions, parallel universes, etc.

You would be surprised, but the 2nd request is easier to fulfill.

I might have to reword my thread here - the engines I'm using are trained on people and cartoons, not on animals or trees, or other phenomenon.

I think I can still get both of these done, but definitely need to work on the dog smoking one more. It's not handling that too well - most of the smoking models are going to be trained on a person smoking, and the animal models are mostly realistic which is tough for the smoking action.
