Thread: [Automating Dorking and XSS Scanning](#)

Chorozon - February 4, 2025, 9:54 pm

Put this together for the lols it automates google dorking to find exposed log in / admin pages and SQL dumps and sensitive information.

don't think i had seen a automated dorking tool.

but i think this concept could actually be decent if attach XSS strike type capabilities or even brute forcing the URL log in list .

Drop any website vulnerability tools that i should take a look at

Updated

Chad VPS / RDP Dorking and Scanning Tool

Updated Tool

Chad-RDP is a Python-based tool for automated Google dorking and scanning, designed to discover Remote Desktop Protocol (RDP), Remote Desktop Services (RDS), and Virtual Private Server (VPS) resources. It uses predefined Google dorks to scrape URLs for RDP web interfaces, downloadable RDP files, RDP-related logs, and VPS control panels/login pages. The tool extracts IP addresses from URLs and performs lightweight nmap scans to identify operating systems and open ports (22, 80, 443, 3389) with services. It includes evasion techniques like user agent rotation and random delays to avoid detection. Results are saved to separate files for URLs and scan data. Intended for educational purposes only, it requires Selenium, python-nmap, and nmap for operation.

Looks good, I like that you've automated the browsing for this (obviously).

I feel like a lot of people here have made comments that make me think they don't know they can do that.

Glad you like it , i had not seen anything similar

Dorks are underrated

Dorks are underrated

They are - dorks are one of the best ways to discover systems without needing to do manual scans.

The amount of just current credentials you can find is insane not to mention if you get creative

You should fork my code i would be interested to see what you do

The amount of times i have found sites working passwords on front facing dumps through dorks is crazy

Send them a email and let them know and they might pay you or hire you))
