Thread: [Good malware crypto miner builder?](#)

AnonUserBB - February 12, 2025, 11:54 pm

Im just looking for a crypto miner builder (malware), I see one on windows thats called Silent Crypto Miner but doesn't work well on Wine.

I got cryptojacked briefly using XMRig. Why do you need anything with 'silent' in the name. Using Wine defeats the purpose and is an emulation tool for Linux.

AnonUserBB - February 13, 2025, 3:50 am

You don't get me, im using linux and I see one called Silent Crypto Miner (and that works on Windows) but is giving infinite errors to use it on wine and its quite a shit to be using a virtual machine on windows just for one tool

better make your own with AI or something bro, totally new and FUD for you. For my gigs I use infinityaigpt.com. GL on your endeavors!

Imaolol1224 - February 26, 2025, 7:01 pm

Interesting thank you

deardavidka - February 27, 2025, 2:56 am

u can see my topic in this thread

GeneralDeltaX - May 14, 2025, 11:49 pm

Hello mate, I do see wich miner builder you're speaking about , I use the latest version of wine staggig + wine-mono and wine-gecko , It work for me , but don't ever run it on a real windows computer cuz It's adding an exclusion path to Windows Defender and try to disable any antivirus , It work but it also try to mine coin on you're own computer for the attacker . Smart move running it on wine.

Borris5ranked - September 5, 2026, 1:32 pm

Same. But I can't seem to find anything on the topic either. But when I do I definitely will be posting my miners.

How do people build crypto miners using AI? What do they tell it for them to program such a tool? Would any typing be involved? Would I just copy and paste everything it tells me?
