I'll start by saying that the first time I didn't trust the seller because he seemed to be "incredibly polite and helpful"...which seemed suspicious to me, so I bought the product for 30 days (telling myself that whatever it is, I'm not losing much). In the end, I realized that it is a professional, web-based stealer (with a very easy and intuitive interface), with a lot of functions. With the subscription, you will also be enrolled in a Telegram channel where, whatever problem you have, you will be helped quickly. Thanks Makarov for the tool. I apologize for the bad English I speak :D...

Questions:

What type of injections does it use?

Based on initial impressions, it appears to resemble a GitHub stealer. Can you clarify?

Which backend technology is used for development? It seems to be coded in Python based on antivirus scans.

Why can I only see scantime detection, but not runtime scanning?

Can you provide a complete list of wallet extensions and hardware supported for capture?

What is the final file size?

Are there any specific dependencies that need to be noted?

It seems like you're missing some critical details here. Without this information, it's unlikely that you'll generate significant interest or sales.

For discord injection it's a basic injection which i can't tell how it works, it's kind of private

We made a github loader for free similar to mint stealer

Backend is NodeJS

We do only scantime test at the moment since it's a budget stealer and we are under beta for new chrome stealing

For list of wallets

<https://paste.cash/?a172bebff46b692#HnRuMs3kARAMUETbJt727WWYgYjGsF2HF2nBqs4XRQ4Y> and no, we do not support hardware

10mb file on python stub (we had a js stub but currently only using PY one, we are recoding go/rust ones)

If windows is up to date with C++ redis (installed in all pc) should be okay but the malware is optimized for W10/11

If you have other questions feel free to ask, keep in mind we are recoding our backend and STUBs that's why there are not much points about it

DO NOT PURCHASE THIS STEALER as of 19th April 2024. This is a SCAM.

I had purchased this Stealer and on the second day the owner of the stealer said they will freeze my account until it's fixed. It's been a whole month now and i'm asking the owner for a refund as his whole chat are saying how bad it is.

Despite this disrespect to his customers including me, I don't think many people should vouch for this guy.

Get a life... You just dont know how this stealer work. Stop posting trash and contact the seller...

HussDrainer - March 15, 2025, 7:17 pm

So upon checking, the Stealer is NOT FUD as it says in the title.

- Build takes 5-10 minutes.
- Discord Webhook doesn't work.
- It has dual hooks upon checking (sends to owner of site + customers logs)
- The initial post never stated anything about BETA, so I just wasted money for nothing.

Will kindly request a refund from the owner of this project as I am disappointed in the false advertisement etc

Edit: My account is suspended upon request and waiting for future update to activate my account again as I was quite dissatisfied with the current website being in "BETA".

Thanks,
Huss

Hello,

About builds, yes it is not instant, each builds are different and obfuscated
Webhook works, check in your parameters
DualHook ? Well. Since we are hosting servers we can have your logs it's normal, but we are not checking customers logs, you can check that every logs you have are intact

I'm sorry you had a bad experience with Mint, I can offer you a suspension of your account until the next update.

Keep in mind that Mint Stealer is a budget stealer, do not expect the best results especially in beta.

Best regards

There are no date since we are multiple devs and that the next update need all dev (front end, back end, stub...) It'll need some time

I would say 1 month, of course you keep the time of your subscription
