SIM-5186353 - February 26, 2025, 7:56 am

Tor is a viable option, but it is quite slow and many sites block access to Tor nodes. Any similar and free alternative??

Thanks ??

There is fast, private, and free. Pick two.

Harden that VPS using hardening scripts (easily found on github).

Set up a VM that runs on the sever.

Start operating (always use SSH/HTTPS and VPN when interacting with your server)

This is the way, the real foundation. You can expand from here, any operation that doesn't have this foundation is not really safe imo.

Very few free VPS offerings
