Thread: [Crypto Wallet Recovery from Mnemonic Seed - Gotchu!](#)

**RetiredWarrior7** - February 28, 2025, 8:54 am

Hey everyone,

So I made a script that helped me recover my BTC wallet after I forgot a few words and the order of my mnemonic phrase. I figured it could help others, so I'm sharing it here!

If you've lost hope because you can't remember your full phrase, don't worry. If you just remember a few parts, I can help you get it back. I've put the script up on GitHub [deleted] if you want to try it out yourself.

If you need personal help, feel free to DM me on Discord: minight\_ or email me at [retiredwarrior@proton.me](mailto:retiredwarrior@proton.me). I'll do my best to help out. If you can, a small commission would be awesome, but if I have time, I'll help you out for free.

Hope this helps, thanks!

Ah yes, let's use your random .exe file to help recover a forgotten wallet.

You can run the recover.py, instead if you got issues with that
