Thread: [\[MRT-X Academy\] Ask Questions about Tutorials Here](#)

Tha Sneak - March 1, 2025, 8:26 pm

If you have any questions regarding the content of the Malware Removal Academy or any malware-related information, feel free to post them here! ?

I'll respond as promptly as possible to ensure you get the answers you need. My goal is to help you thoroughly understand the content, so don't hesitate to ask—no question is too small or too basic!

? Need clarification? Ask away!

? Want additional details? I've got you covered!

? Curious about a specific topic? Let's discuss!

Looking forward to helping you out! ?

(Mar 4, 2025 10:54 PM)Virulent Wrote: [\[CITE\]](#) Not so much a question on the tut itself but the tech.

Is HJT still relevant and used in the wild, or just something we'll utilize for our purposes?

The HJT userbar is so nostalgic in my head, I'd just like to play around and get proficient with it for the sake of it.

So, HijackThis was purchased by this guy <https://github.com/dragokas/hijackthis> who open sourced it.

It is now known as Hijackthis Plus it is pretty much beat in every way by FRST, which is the golden standard for malware removal tools at the moment due to its scripting ability.

I have posted the HijackThis source code in a HF repository and I have reverse engineered FRST and posted the source code in said same repository. My goal is to take HijackThis Plus and turn it into a HackForums version of HijackThis with a lot more potency and use. However, I would also like to make our own version of FRST as well.

I love the HJT userbar myself and like I said all the content for HJT is there, but it is completely optional to learn. You will find how much better in comparison FRST is from reading the tutorial. Even OTL is by far superior to HJT and OTL is also a discontinued tool.

(Mar 4, 2025 11:02 PM)Virulent Wrote: [\[CITE\]](#) Ah perfectly explained. Maybe FRST first as you mentioned and then HJT for fun down the line then.

[x e D](#) fyi

Yeah that's why I made all those tools optional because they're mostly useless now as bad as I

hate to say it.

In regards to the Safe Mode tutorial, I thought that F8 was not working anymore, and a quick search seems to indicate that it only works on legacy boot or BIOS. At least, it's considered a legacy boot option.

You're correct, when I was re-writing these threads from long ago I overlooked that. Thanks.
