Thread: [\[Garfield RAT\] C++ Native RAT \(Developing\)](#)

Pyrite - March 4, 2025, 6:44 pm

I'm currently developing a RAT in c++. It's called Garfield RAT and for now it has some features which i will list here:

AdministrationSystem Information

Web Execute

Execute LUA Script

Ransomware

Installed Applications

MonitorProcess Manager

File Explorer

Keylogger

Remote Desktop

Live Microphone

Extract Passwords

Reverse Shell

Crypto Clipper

Crypto Miner

SecurityDisable Defender

NetworkScan Ports

Send Web Request

ClientDisconnect

Shutdown

Reboot

Elevate Permissions

I have no coded all the features yet but most important ones are already finished. It only takes some polish and done.

I will probably sell it here so i want feedback from potential buyers. Say your honest opinion about my features, what could i add, how can i improve my gui and some kind of idea of how much is this worth it.

Here are some screenshots of the RAT (builder not done yet):

Oh and you will have to copy-paste them because i don't have 50 posts so i can't upload images

i.imgur.com/1Yeq3Z1.png

i.imgur.com/Jz0H8QN.png

Thats some features i coded. The ones that show up are fully functional.

Let me know what you think.

xiaowanga8 - March 5, 2025, 2:29 am

I have written several rats in C++/asm! Can we implement it together?

xiaowanga8 - March 5, 2025, 10:09 am

(Mar 5, 2025 03:48 AM)anogon Wrote: [\[CITE\]](#) I'e never worked with anyone for a project. I'll give it a try. Write me at discord anogon#6823.

I don't use discord. I'm currently using a traditional dark web browser and telegram.
#alwkd2

p1u70wr13 - March 5, 2025, 10:53 am

Willing to test it out, are you giving vouch copies?

Pyrite - March 5, 2025, 12:39 pm

(Mar 5, 2025 11:53 AM)p1u70wr13 Wrote: [\[CITE\]](#) Willing to test it out, are you giving vouch copies?
Hi, im REALLY new to this. I've been developing this type of things for a while but selling them and all that stuff is new.

Can you explain what a vouch copy is? I expect it to be some kind of test copy but i don't really want to mess up and leak source code or something.

If you explain me this i will be happy to do it :)

asdrta4er - March 5, 2025, 2:55 pm

(Mar 5, 2025 01:39 PM)anogon Wrote: [\[CITE\]](#) Hi, im REALLY new to this. I've been developing this type of things for a while but selling them and all that stuff is new.

that is exactly what a vouch copy is, you give it to someone (typically someone who has popularity in the forum) to test it and they will review it.

anywayssss i would really like a copy tho ive been looking for a RAT with live microphone.

Pyrite - March 5, 2025, 3:53 pm

(Mar 5, 2025 03:55 PM)asdrta4er Wrote: [\[CITE\]](#) that is exactly what a vouch copy is, you give it to someone (typically someone who has popularity in the forum) to test it and they will review it.

Thanks i already had someone to explain me what it is.

As i said, the rat is already in development state and some features (in this case the live microphonr) are not coded yet. Now im going to sleep but tomorrow if i have time i can program the live microphone and send you a vouch copy.

Ill pm you when its done. Thanks.

Xworm has it ???

(btw HOW TO I UPLOAD A TXT FILE TO A THREAD AND MAKE IT COST SOME BYTES???)

Pyrite - March 6, 2025, 1:00 pm

(Mar 6, 2025 01:13 PM)CoolGuy441 Wrote: [\[CITE\]](#) Xworm has it ???

(btw HOW TO I UPLOAD A TXT FILE TO A THREAD AND MAKE IT COST SOME BYTES???)
Download an XWorm server from anywhere and it will be a client underneath.

CoolGuy441 - March 7, 2025, 6:17 am

(Mar 6, 2025 02:00 PM)anogon Wrote: [\[CITE\]](#) Download an XWorm server from anywhere and it will be a client underneath.

No, I have the source code right here on my hard drive

EDIT: I mean, yeah most of XWorm server are infected if you download it on the internet, this is facts.

Pyrite - March 7, 2025, 9:58 am

Where did you get the source code? And is it really trustable? I once found on github a .sln file infected. It took up 600kb (definetely not what a solution file would) and when i opened it with notepad++ it had the DOS signature at the start. Since then i dont trust anything.

(Mar 5, 2025 03:55 PM)asdrta4er Wrote: [\[CITE\]](#) that is exactly what a vouch copy is, you give it to someone (typically someone who has popularity in the forum) to test it and they will review it.

Ok i just realized that i cant pm you because i need more posts but you can contact me on discord at anogon#6823 as the live microphone is already coded and i want some feedback as i had some problems making it work so im really really sure that there are bugs.

For some update, this is the current progress if someone is reading this and want to test any specific feature.

Also there are two features that i wont add because someone in the forum warned me that they are not allowed to sell here. I will mark them with an .

AdministrationSystem Information (Needs more information. Showed information is already on the clients list)

Web Execute

Execute LUA Script

*Ransomware

Installed Applications

MonitorProcess Manager

File Explorer

Keylogger

Remote Desktop (For now is lagging a bit)

Live Microphone

Extract Passwords (Needs more support, for now only chromium browsers)

Reverse Shell (Needs improvement)

Crypto Clipper

Crypto Miner

SecurityDisable Defender

NetworkScan Ports

Send Web Request
ClientDisconnect
Shutdown
Reboot
Elevate Permissions

Like I said on my first thread, I found it on github, but I've checked every single file, there was just an "ExecCommand" in the .csproj, so I removed it, and now it's completely cleared.

Pyrite - March 8, 2025, 8:42 am

(Mar 8, 2025 09:14 AM)CoolGuy441 Wrote: [\[CITE\]](#) Like I said on my first thread, I found it on github, but I've checked every single file, there was just an "ExecCommand" in the .csproj, so I removed it, and now it's completely cleared.

But how are you so sure that theres not something more infected? If i found that n one file i would completely wipe it out from my disk immediately.

CoolGuy441 - March 8, 2025, 9:08 am

(Mar 8, 2025 09:42 AM)anogon Wrote: [\[CITE\]](#) But how are you so sure that theres not something more infected? If i found that n one file i would completely wipe it out from my disk immediately.

I have checked every single file, EVERY SINGLE ONE, I am entirely sure that it is completely cleared and safe.

Also, the plugins were precompiled, so, I decompiled those and checked every single plugin.

Pyrite - March 8, 2025, 10:01 am

I saw the repository you were talking about (i think so) and it has some obfuscated files so i couldnt get to compile it because visual studio was interpreting strange characters. Also the forms are obfuscated and they dont even have a meaningful name (Form1.cs, Form2.cs...). They were very large and obfuscated so i dont know...

I prefer using an existing RAT and using some private crypter.

CoolGuy441 - March 8, 2025, 1:06 pm

(Mar 8, 2025 11:01 AM)anogon Wrote: [\[CITE\]](#) I saw the repository you were talking about (i think so) and it has some obfuscated files so i couldnt get to compile it because visual studio was interpreting strange characters. I don't think we saw the same repo, actually.

Here are some screenshots of the tree:

aHR0cHM6Ly9pbWd1ci5jb20vYS9TR1JNSTU0Cmh0dHBzOi8vaW1ndXluY29tL2EvbnJOY1Nldg==
There is not any obfuscated file.

Btw, what crypter would you recommend? Free and paid. I heard of the Malburrow one, don't know if it's really good but it looks like it is.

Also, here is the repo on webarchive:

aHR0cHM6Ly93ZWluYXJjaGl2ZS5vcmcvd2ViLzlwMjUwMTA4MTI1NDM5L2h0dHBzOi8vZ2l0aHViLmNvbS9Xb3JtLXgvWFdvcm0tNS42LUZVTEwtU291cmNILUNvZGU=

And last thing, in the .csproj there was a dropper, look at this :

aHR0cHM6Ly9wYXN0ZWNvZGUuaW8vY2kyOWNyeg==

Pyrite - March 8, 2025, 4:48 pm

And last thing, in the .csproj there was a dropper, look at this :

aHR0cHM6Ly9wYXN0ZWNvZGUuaW8vY2kyOWNyeg==

Nah we didn't saw the same repo but the technique is the exact same.

You are saying that if i remove that shitty exec i should be fine right? Im going to check the files anyways but its for being sure.

EDIT: I just realised that i cant download it becuase there arent mappings on archive.org for the download url.

(Mar 8, 2025 02:06 PM)CoolGuy441 Wrote: [\[CITE\]](#) I don't think we saw the same repo, actually.

Oh sorry i didnt saw the crypter question. I dont really know about the crypter market so i cant say anything but they usually last for a week or so.

If you have the ability to do it it will be free and FUD for some months. If you dont have the skill (which i do understand because it isnt easy to make undetectable) then search for crypters from known sellers here.

DeathPenalty666 - March 10, 2025, 7:35 am

KEEP ME UP TO DATE im interested x1000

will it have lifetime option^

Comrade - March 10, 2025, 8:11 am

The design reminds me of NyanWorm which was developed long time ago by NyanCat

Pyrite - March 10, 2025, 10:37 am

(Mar 10, 2025 08:11 AM)Comrade Wrote: [\[CITE\]](#) The design reminds me of NyanWorm which was developed long time ago by NyanCat

I cant find any picture. Can you find one? Im really curious now that you said it.

(Mar 10, 2025 07:35 AM)aralala01 Wrote: [\[CITE\]](#) KEEP ME UP TO DATE im interested x1000 will it have lifetime option^

Hi, I expect it to be lifetime only, no monthly subscriptions or anything. I dont know what price is good for it and this project may take a little longer as there are some stability bugs.

I will be updating via sub-threads what i added and if someone wants something in specific just tell me and i might add it.

CoolGuy441 - March 10, 2025, 1:44 pm

UPDATE:

I added the keylogger. You can start it and stop it whenever you want and it also shows the current window of the client.

(Image links are base64 encoded)

Image: aHR0cHM6Ly9pLmltZ3VyLmNvbS9zdEJ3R0hmLnBuZw==

LUA execution and basic functions for the api.

Current functions:

- message_box
- send_http
- sleep
- process_list
- process_kill
- exec
- tcp_connect
- tcp_close
- tcp_recv
- tcp_send
- aes256gcm_encrypt
- aes256gcm_decrypt
- aes256gcm_keygen

Image: aHR0cHM6Ly9pLmltZ3VyLmNvbS9mUFo0Tms1LnBuZw==

Send web request.

Image: aHR0cHM6Ly9pLmltZ3VyLmNvbS93cGFHS1ZYLnBuZw==

Crypto miner.

Executes xmrig as a sub-thread of the client. Available coins: XMR, RVN.

Image: aHR0cHM6Ly9pLmltZ3VyLmNvbS9leVJCWkYxLnBuZw==

Now all that remains is:

- Web execute
- Shutdown
- Reboot
- Elevate permissions

I'll be waiting for any opinion.

If you explain me this i will be happy to do it :)

if you're worried about leaking src, have most functions server sided like seroxen was. the builders alright but it js looks like quasar with color changes right now. if you need example src for certain functions you can check github.com/quasar-continuation/pulsar/. its made by a friend of mine but it allows any1 to push so it might be helpful to see how some of those things work

Hi, the rat was going to be everything local. I dont have any money for servers so its my only option.

Now im working on a new version to improve the first one and now its much better. The only thing im struggling at is building system. I want it to e embedded into the stub but i dont know any way of embedding it and that it works with crypters. I tried making a new .con section in the PE header but i dont know if it is good or not.

Thanks for your reply :)

off another?

I dont use any crypter. When i need to crypt something i do it customized. And what i was worrying about is that maybe my rat's building system will not be compatible with crypters in the market.

GOLLUM - May 7, 2025, 6:41 pm

when will it be ready?

Pyrite - May 8, 2025, 5:57 am
