Thread: [How to use any RAT online without port forwarding](#)

CoolGuy441 - March 7, 2025, 6:23 am

Hiiii, HF!!!

Quick post on how to use any rat (in this case XWorm) online, without port forwarding!

Here is the link to the tutorial I just made yesterday:

(As I can't post a link, here is the Base64 encoded link:

aHR0cHM6Ly95b3V0dS5iZS9JY1FVVm1jYkxBRQ==)

It's made for people who really don't know anything about RATs.

Hope you guys like it!

This is literally a tutorial on how to do port forwarding semi-anonymously.

Absolutely, but people who are new to that thinks port forwarding is going to your router and all

poundsmoney1992 - March 9, 2025, 6:57 pm

who can teach me how to use rat virus to spam

Forget about getting a response on a RAT thread. You're not even making sense.

I hate to be that guy, but you are initially using the loopback address which is an internal address and never requires port forwarding.

You then literally used portmap to configure your forwarded ports on the vpn . the title is a bit misleading

OP explained that the title was because n00bs only think that port forwarding applies to NAT on a router.

Absolutely nowhere in the op thread or the video is it "explained" that "n00bs only think that port forwarding applies to NAT on a router"

Again, the title is misleading. as he literally configured ports so its not "without port forwarding". Just a little constructive critique.
