Thread: [fud.su | Online Crypter | Scantime & Runtime FUD | Bypass SmartScreen](#)

Tyrone Johnson - March 12, 2025, 4:37 pm

[fud.su Online Crypter](#) --- Formerly fud.bio --- (Jun 27, 2025 11:36 PM)TyroneJohnson Wrote: [\[CITE\]](#)
Update is now live! View full details [here](#).

ChangelogIntroduced DLL Sideload capabilities, allowing signed programs to execute payloads and bypass antivirus software, SmartScreen, and email filters.

Payload Optimization: Refactored existing payloads to ensure seamless execution, minimal detection, and accelerate further development.

Evasion Techniques: Improved optional injection into target process to evade detection by EDRs.

User Interface Updates: Streamlined our user interface to provide a more intuitive and user-friendly experience for users.

Vouch copies will resume going forward.

Scan Results

(Oct 10, 2025 06:51 PM)TyroneJohnson Wrote: [\[CITE\]](#) Scantime (0/36):

https://kleenscan.com/scan_result/000479cd160a0c0f74bdda6e326c62e033538afbc9d0264a4f6913b7b6c75ee5

Runtime (0/18):

https://kleenscan.com/runtime/scan_result/c954d3dfd5c2357acc7b478a26e41b4c7fe2020e0d989db0da72d4300f801db8

Runtime scans were done using a clean native executable that would pop open a message box - results may vary due to your software.

Vouches

Offering Vouch Copies to reputable members. PM me if you would like a vouch copy.

2/3 Available

Spoiler [\(Click to View\)](#)

(Apr 8, 2025 08:18 PM)CompulsivePurchaser Wrote: [\[CITE\]](#) I received a vouch copy and did some testing here are the results.

My Config was a native backconnect Stub with Startup enabled on the Crypter side. The startup is done as a registry key so it maintains stealth.

Runtime: 6/21 on Scanner.to

<https://scanner.to/result/HnX4yMXD5RCi> 6/21 - But to be honest except Kaspersky, all other solutions are very rarely used could be considered a 2/21 because Bitdefender is still somewhat used.

Scantime: 1/40 Kleenscan

https://kleenscan.com/scan_result/1fd5cd0bb52e7073b4b2482ac0f2feff18157e7278d4fa68cf02626463914c32 - The only scantime detection was done by CrowdStrike Falcon, that thing is an

EDR/XDR and will probably flag anything with no signature.

Kleenscan Runtime (Beta) : 1/14

https://kleenscan.com/runtime/scan_result/f95610cd6bf65eedb8adb8d13cc997a76c7ca1ec97bfe8215fbd16df7ce84d66 - Once again, it bypassed all popular AV Solutions with the only detection being CrowdStrike again, this second Runtime scan confirms its runtime fud is no fluke, plus I must remind that its doing so with Startup enabled. Reason for bitdefender bypass is that Kleen Runtime is only up to 60 seconds.

Overall score taking price into account, solid 9/10 this is a 30\$ Crypt that you can make instantly on the website and its doing much better than many other websellers that have a much higher price, product is brand new and just like all crypters it will need constant work and updates to either maintain this level or improve it but atm I would say buy it no doubt even if your budget is higher you might want to give this a try and save yourself some money on certain encryptions.

Tyrone Johnson - March 13, 2025, 7:16 pm

We always FUD ?! Updated thread with scans. You can see the payload successfully executed in all videos. Other ninjas ? fake runtime scans by uploading to scanner.to with antivm.

hoangdoan - March 15, 2025, 5:06 pm

Hello. Can the output file have editable icons? And can I edit its size?

Tyrone Johnson - March 15, 2025, 8:17 pm

(Mar 15, 2025 05:06 PM)hoangdoan Wrote: [\[CITE\]](#) Hello. Can the output file have editable icons? And can I edit its size?

We are working on that. Here's the current roadmap.

- Icon and Assembly Editor

- Pump Feature

- AntiVM

- Startup

- Optional Injection into System Process

- DLL Sideload

- Automated x64 Crypting

- Automated DLL Crypting with support for proxying exported functions

Startup works if enabled in the original binary. The crypted exe is fully standalone requiring no additional files nor internet connectivity. Please use Startup and AntiVM in your original binary for now.

If you require that currently, we can do that manually for you through support. Just send us a passworded zip with your file.

hoangdoan - March 15, 2025, 8:27 pm

(Mar 15, 2025 08:17 PM)TyroneJohnson Wrote: [\[CITE\]](#) We are working on that. Here's the current roadmap.

Yes, please PM me if you want one.

ExploitFinder01 - March 18, 2025, 10:51 pm

Any experienced user tried this ? need to be certain this works as promised. Price is fair and i'm excited for the roadmap. GLWS in the meantime.

hoangdoan - March 19, 2025, 9:35 pm

Can you give me a trial version? I would love to buy it, but your reputation is currently unsecured, you know.

Tyrone Johnson - March 20, 2025, 9:32 am

Vouch copies still available to reputable members.

cweluchjebany - March 20, 2025, 5:32 pm

Hi contact me on dm because I have a problem

ebukanneka - March 21, 2025, 4:49 am

Please I want a trial test. Is it possible

Tyrone Johnson - March 21, 2025, 6:27 pm

(Mar 20, 2025 05:32 PM)cweluchjebany Wrote: [\[CITE\]](#) Hi contact me on dm because I have a problemWe have resolved the issue. The user uploaded a .NET executable that only works when loaded in a x64 process (due to how the program behaves). We have provided the user with our manual x64 crypts without extra charge. We have updated our system to reject .NET exes with a 64 bit architecture flag, if any previous users have their executables falsely rejected, contact us.

(Mar 21, 2025 04:49 AM)ebukanneka Wrote: [\[CITE\]](#) Please I want a trial test. Is it possible

Vouch copies are still available, but reputable members are preferred.

gdfga - March 22, 2025, 5:06 am

give me your telegram i want ask you, or dm me in this forum

Tyrone Johnson - March 28, 2025, 5:14 pm

Your voices and opinions have been heard. [We have updated per request.](#)

Changes: Users can now modify resources for the crypted file. This includes assembly information, and icons.

Injection into system processes is now supported. Masquerade your file behind the facade of a legitimate windows process.

Startup persistence can now be enabled for the crypted file. Is important to enable this option if you also choose to inject into a system process.

Anti-Virtual Machine technology has been implemented. No longer fall victim to honeypots and reverse engineers.

For the first 20 users, use code HFUPDATE10 for 10% off your entire order!

My file detect after 12h of crypt

For this price it is not worth it ?

Tyrone Johnson - April 12, 2025, 7:20 am

(Apr 11, 2025 07:06 PM)hoangdoan Wrote: [\[CITE\]](#) My file detect after 12h of crypt

For this price it is not worth it ?

We are not responsible for detection on your individual stub after use as it depends on what your program is doing and your distribution. Most detections only affect your individual stub due to our strong polymorphism. You likely had your stub uploaded to VirusTotal or a similar website that shares files with AV companies. The price comment is off topic and we have plenty of satisfied customers.

We would be glad to provide samples to a reputable member or staff to check the quality of our crypts.

zilda1 - April 13, 2025, 2:06 am

I tried it, it's worth it. I hope you continue updating it.

Tyrone Johnson - April 13, 2025, 8:13 am

clean messagebox exe scans for one of our stubs:

https://kleenscan.com/scan_result/b191631ed77b30e35ea0947369d99be8dee8a484ec5935f15b9c9a4183374dd5

https://kleenscan.com/runtime/scan_result/2f063291dea354108efeefa9bab4b4a03fbbd640169b82517e94810dd3da518c

<https://scanner.to/result/LQQ9aVKA8EkX>

We can confirm our crypts are compatible with [xloader](#). Make sure to disable the crypter's startup and injection.

xloader scans:

Note the runtime may not be entirely accurate since xloader performs operations after a long sleep.

GLWS

I believe this should be bannable, as it borders on scamming to perform a runtime scan on a simple 'Hello World' script.

Nobody buys a crypter to encrypt a file that's already fully undetectable (FUD), it's clear the purpose is to test detection, not to mislead users.

OP. Provide real scans or we gonna mass report u and take out of market for those kind a tricks. ?

Yes, behavioral detection is a thing no one's denying that. But let's be real: a "Hello World" binary has zero meaningful behavior. Testing behavioral detection with that is pointless and misleading.

Your entire reply comes off as deflection and manipulation. Instead of taking accountability, you're blaming other providers that doesn't make your scan any more valid.

Crypter runtime tests must be done on actual, basic malware samples that don't use anti-VM like older, stripped-down RATs. Anything else is a false runtime scan and borders on a scam.

I'll be reporting this along with a -rep. This kind of behavior deserves moderator attention.

Tyrone Johnson - April 17, 2025, 12:04 pm

I literally included xloader scan. You can't read and obviously can't reason either. I clearly acknowledge that runtime may vary based on your software. Most crypters here ADD DETECTIONS to clean software. I suspect you are in kahoots or something with warlordcrypts. No one is scanning DarkComet. Please get out of my sales thread.

Here are scans for Quasar rat provided by one of our clients. You can tell the payload is ACTUALLY EXECUTED since the ESET detection is a memory one.

<https://scanner.to/result/P8ShYWXcMWL9>

I bet you won't retract your statements because you're not acting in good faith.

Tyrone Johnson - April 17, 2025, 12:40 pm

(Apr 17, 2025 12:31 PM)Chornaya Magiya Wrote: [\[CITE\]](#) Wdm no one scanning popular rats ? Please take a look into crypters marketplace.

<https://hackforums.net/showthread.php?tid=6293451> - DarkVision RAT

<https://hackforums.net/showthread.php?tid=6104656> - Quasar RAT

I can go more and more. And u are saying they even ADD DETECTIONS to clean software btw that is totally normal on popular crypters since they methods gets flagged, that's why they update stub daily. But on fresh stub they do runtime scans on popular rats and its FUD or atleast UD.

While u refuse to do normal scan on highly detected runtime to look legit while u are not.

U did scan on xloader which overall is not highly detected runtime because of the way its created. BTW even on xloader c++ app your file size after crypt is almost 5mb that is overall huge red flag. You don't know shit and just contradicted yourself. Please leave cretin. I literally posted a Quasar scan. I see no external scans from most competitors. Why don't you go bother the rest? Are they your friends?

Chornaya Magiya - April 17, 2025, 1:19 pm

Ah ok did not see, seems fair. Rename it to UD crypter and dont be surprised by critic when u say FUD while its UD.

What am trying to say that calling it a FUD crypter while crypting already FUD .exe file its just a trick to lure newbies and that is not acceptable.

No one out here does that, better is just don't provide runtime results at all.

When ever u rename it to UD crypter and add proper Quasar rat scan on main thread i will change

-rep to +rep.

No one out here does that, better is just don't provide runtime results at all.

When ever u rename it to UD crypter and add proper Quasar rat scan on main thread i will change -rep to +rep.

Why don't you CTRL F on this forum for FUD? You don't have any problem with them. They don't even bother justifying their claim. Should putting FUD in the title without a scanner.to scan be bannable? What about 30-60 seconds scans sometimes with internet off (our competitors do this)? We maintain the highest standards and only scan 180 seconds with internet ON. Clean software is the best benchmark since it measures the detection based on the crypter's behavior. Have you ever thought that the unpacking process of crypters could be detected runtime? We are not responsible for shit malware. You are probably just the friend of a competitor who sells an inferior product coming here to sabotage.

(Apr 17, 2025 03:47 PM)warlordcrypts Wrote: [\[CITE\]](#) wheres the proof? else this is just spew itself ? We have a FUD certificate in the Pentagon. You can visit yourself if you don't believe. We were FUD checked by John Hammond, Eric Parker, and Mental Outlaw. Our developers have over 20 years of experience, served in offshore CIA secret operations, and are 6'2 with strong jawlines. You got mogged buddy.

bigcriminal1337 - April 27, 2025, 4:10 am

You guys realize that the proper way to scan runtime of crypter is with MSGBOX? Op is 100% in the right and everyone who fights with him is clearly clueless. Behavior is not a problem of crypt, crypt has only one job and that is to execute. If execution is FUD, all other issues should go to your trash software developer, you expect to bypass leading AV's with software that is shared with thousands of people?

Remember to always use a contract and if possible a middleman.

Disclaimer [\(Click to View\)](#)

This messages acts as a communal reminder, it has no intent to discredit the OP or parties involved. This follows current forum guidelines (June, 2025).

In most cases the OP either has no sales record or has refused a vouch contract whilst stating one is open to vouches.

Signatures have been disabled to ensure no form of promotion is included in this message.

We just don't want to deal with you. Vouches are handed out at our discretion and you are not guaranteed one. I have explained our temporary pause in a post above. We have vouches from paid customers.

Tyrone Johnson - June 18, 2025, 12:43 pm

I apologize for the long silence regarding development, but we will soon be releasing our next major

update.

Changes/Features: DLL Sideload

- DLL Sideload crypts will cost 2-3 credits at the time of posting this; but will most likely change.

Refactored codebase

- Will accelerate the development process going forward.

Expect more consistent updates regarding evasion as core features have been implemented. If any major changes are made to our service, they will be shared here and on our website. If users have any suggestions or feedback, please share!

Tyrone Johnson - June 27, 2025, 11:36 pm

Update is now live! View full details [here](#).

Changelog Introduced DLL Sideload capabilities, allowing signed programs to execute payloads and bypass antivirus software, SmartScreen, and email filters.

Payload Optimization: Refactored existing payloads to ensure seamless execution, minimal detection, and accelerate further development.

Evasion Techniques: Improved optional injection into target process to evade detection by EDRs.

User Interface Updates: Streamlined our user interface to provide a more intuitive and user-friendly experience for users.

Vouch copies will resume going forward.

Is the Process Injection working on the new Windows 11 24H2 version?

periodoinicio - July 9, 2025, 3:17 pm

I want to buy

Tyrone Johnson - July 10, 2025, 3:11 pm

(Jul 9, 2025 01:35 PM)Dop4mineLogs Wrote: [\[CITE\]](#) Is the Process Injection working on the new Windows 11 24H2 version?

Yes. We don't use a process hollowing / RunPE technique. This practice is heavily dated and detected and should not be utilized in the big 25.

The Process Injection option is optional and does not impact detections. If it is not chosen, our shellcode is executed within the context of the process of the original crypted file on the disk. Otherwise, an instance of the desired target process will be spawned and the shellcode will be executed within that process.

Hope this clarifies any misconceptions or concerns.

(Jul 9, 2025 03:17 PM)periodoinicio Wrote: [\[CITE\]](#) I want to buy

JonteAka - July 10, 2025, 3:57 pm

Does the DLL sideloading have an option to choose icon?

Which popular apps are being sideloaded? Are there any related to adobe reader?

Tyrone Johnson - July 10, 2025, 3:59 pm

(Jul 10, 2025 03:57 PM)JonteAka Wrote: [\[CITE\]](#) Does the DLL sideloading have an option to choose icon?

Which popular apps are being sideloaded? Are there any related to adobe reader?

You cannot change the icon of the application used for DLL Sideloading since it will remove the validity of the certificate (ie. no more SmartScreen bypass).

We currently have released with Steam, Python, and Avast Browser; but more are to come with time.

JonteAka - July 10, 2025, 4:26 pm

(Jul 10, 2025 03:59 PM)TyroneJohnson Wrote: [\[CITE\]](#) You cannot change the icon of the application used for DLL Sideloading since it will remove the validity of the certificate (ie. no more SmartScreen

Those are few choices. Will come back when theres more, particularly adobe/word variants

fxweezy - July 10, 2025, 11:20 pm

Vouch copies ?

JonteAka - July 11, 2025, 6:49 am

How many dlls are generated (using Python app)?

Tyrone Johnson - July 11, 2025, 2:27 pm

(Jul 10, 2025 04:26 PM)JonteAka Wrote: [\[CITE\]](#) Those are few choices. Will come back when theres more, particularly adobe/word variants

If you know of any apps with these desired icons please forward us the name. We are happy to add apps, we just need to know which to reverse engineer.

(Jul 11, 2025 06:49 AM)JonteAka Wrote: [\[CITE\]](#) How many dlls are generated (using Python app)? The Python sideload contains 2 DLLs. One has the payload bundled, the other is a visual c runtime in-case the machine does not already have it installed since Python requires it. No sub-directories, just the root folder.

(Jul 10, 2025 11:20 PM)fxweezy Wrote: [\[CITE\]](#) Vouch copies ?
Currently all distributed, just waiting on reviews.

JonteAka - July 11, 2025, 2:54 pm

PDFEscape, Haihaisoft PDF Reader are some good apps to add there

JonteAka - July 14, 2025, 5:04 pm

Also, do u bypass UAC?

Tyrone Johnson - July 15, 2025, 2:01 pm

(Jul 14, 2025 05:04 PM)JonteAka Wrote: [\[CITE\]](#) Also, do u bypass UAC?

No. We are contemplating adding a technique, but still would not recommend using it. UAC bypasses are detected at runtime by most AV/EDR solutions nowadays as an IOC. I believe it would be better to attempt elevation on the system with your own tooling. Our job is to minimize detections, and adding a UAC bypass would go against this.

gruppen - July 16, 2025, 2:01 am

hello,

I tried Mutliple crypts with Pulsar and all of them were shown undetected at scantime on kleenscan at first. However running them on an actual windows device caused it to get detected. Owner (I assume) told me it was my fault cause somehow I sent the file to AV Vendors even though I only transferred files locally. it could work but you'd have to get lucky I guess. And good luck getting a credit refund if its not fud.

As per the response to your ticket on the site:

I. Yes it works with Pulsar RAT.

II. No, each stub is unique and undetected upon generation.

III. Our crypts are undetected for WD, but DLL Sideloadng is required for Smart Screen.

IV. The file will remain undetected until shared/distributed to AV vendors. Please note that simply having the file on your disk with internet connectivity may prompt your antivirus to submit the file for

review due to its low trust score - Windows Defender is notorious for this. Also, uploading the crypted file to common file hosts without encryption / passworded zip file may also result in the file being distributed to AV vendors.

You did not provide us with your files in your ticket. Staff will examine your files when we have time.

Whenever a runtime detection occurs, it is likely due to user error such as crypting a file that drops detected files or software configuration (uac bypasses or powershell commands being detected). If you have a specific software in mind, we will crypt it and report runtime detections and recommended settings.

EDIT: Here is the entire ticket conversation with this user.

- I. The user is shown to be uncooperative with staff when files were requested to verify and resolve claims.
- II. Staff quickly responded to the ticket as shown in the timestamps from beginning to end.
- III. Our payment processing is automatic and awaits confirmations on the transaction. The user was credited within ~30 minutes of his purchase.

I'm not sure if this is incompetence on behalf of the user, or just behavior of a grifter.

Black Jacket - October 22, 2025, 8:26 pm

DLL Sideload has been supported for months, and x64 support was offered through support as needed since launch. Given the project being not even being a year old, and the developers having full-time jobs and other obligations, the development time-frame is completely fair.

Why come here to just start shit? There is very few services that provide a quality automated system with extensive support - yet alone at our price.

Sorry we do not like to donate our money for nothing.

Scarecrow - November 11, 2025, 1:13 pm

Runtime specifics? 0/23 is not anything special on a program that does a message box. Try it on current malware please and specify if Internet is ON / OFF, and how long you ran it for, when last update of the AV was etc.

Tyrone Johnson - November 12, 2025, 9:06 am

(Nov 11, 2025 02:13 PM)Scarecrow Wrote: [\[CITE\]](#) Runtime specifics? 0/23 is not anything special on a program that does a message box. Try it on current malware please and specify if Internet is ON / OFF, and how long you ran it for, when last update of the AV was etc.

We explicitly state that runtime detections can vary based on your software. We use a clean "hello world" message box executable to identify detections that arise from the crypter itself. If you would like to see scans of a particular software, send us a PM.

The scans are performed via Kleenscan. I believe if you visit the scan pages it should share the settings: all AVs enabled, internet on, and runtime scans show execution with the message box opening - no antivm trickery ?.

When updating, we always test against Windows Defender with Cloud Protection enabled across multiple VMs with the latest definitions available since we know some of these runtime scanners are not the most accurate.

I hope this clarifies any misconceptions.

(Nov 11, 2025 01:45 PM)SIM-23882 Wrote: [\[CITE\]](#) thats why the next 2 posts after me are also people having issues? but you want to make it a pain in the ass for everyone.

Sorry we do not like to donate our money for nothing.

People are quick to share when they have issues, but very little come back to share positive feedback. Majority of the issues we resolve via our ticket system, and a lot of them are simply user error. In some cases we do come across compatibility issues with software, and in that case we try our best to resolve it. If we cannot resolve it in a timely matter, we simply refund the user.

(Nov 11, 2025 01:24 PM)zilda1 Wrote: [\[CITE\]](#) Numerous errors in the latest encryption. I lost six points for nothing. I submitted proofs on the website.

The encryption has been the same for over a month now. Consider not crypting files until you believe the issues are resolved. We are aware of your ticket on the site, and working towards a solution.

EDIT: Please check your ticket.

I have something private you can test it on if you want better results for sales (as in actually showcasing it against malware), you can just have my stub too. I don't use it, but it would accurately show how many RT detections it gets.

Side Note: You will ALWAYS have detections without a cert. Even the best 30k/month crypters get 1/23, so OP don't be ashamed of it. We just wanna see real results of stuff that would actually be crypted.

ableme0093 - November 12, 2025, 11:08 am

I contacted you through the website but received no response.

We are just getting back online and working on moving our infrastructure to TOR. Please expect delays.

Also, we have yet to receive the original files to process. We cannot identify or solve any problems/detections without the original files. From our testing and feedback with other customers, there is no issues/common detections with Windows Defender due to the crypter itself.

zilda1 - November 23, 2025, 12:26 pm

Does the crypted file come alone or it need other files/resources to be spreaded with?

Tyrone Johnson - January 10, 2026, 8:35 pm

(Jan 10, 2026 08:58 PM)kenomaskox Wrote: [\[CITE\]](#) Does the crypted file come alone or it need other files/resources to be spreaded with?

Our standard crypts come as a single executable file (.exe).

DLL Sideloaded crypts come with 1-2 DLL(s) that will need to be bundled with the signed application when sharing. We recommend using a zip archive.

I believe we responded to your ticket. It is potentially related to behavior of the original file, but we will still investigate and see what can be done from our end.

(Jan 18, 2026 05:36 AM)bananapple Wrote: [\[CITE\]](#) Nice crypt! FUD! 0/36

Your answer is ridiculous. I have one that's also being exposed. The problem, my friend, is that your encryption needs improvement; it's been compromised.

Tyrone Johnson - January 25, 2026, 8:21 am

But we are not facing many complaints relative to our total sales/customers? Most of the time users will not even provide the file(s) to staff when asked, so we are left to assume they are grifters trying to get free credits. Most of the valid tickets are related to broken crypted files due to incompatibility issue with certain software configurations which we attempt to resolve or simply refund for.

We have checked the injection feature on our site with Windows Defender, Cloud Protection enabled - no detections.

Once again, if you have a valid complaint, open a ticket. You do not have any unresolved tickets on the site. You are also free to use any other service.

ghoostmood - February 1, 2026, 7:59 pm

your website only shows btc, you should add USDT TRc20 as mode of payment, will love to try it out and is it compatible with # and how long does it stay FUD.

Tyrone Johnson - February 2, 2026, 10:38 am

(Feb 1, 2026 08:59 PM)ghoostmood Wrote: [\[CITE\]](#) your website only shows btc, you should add USDT TRc20 as mode of payment, will love to try it out and is it compatible with # and how long does it stay FUD.

We will look into supporting USDT in the future.

The crypted file is guaranteed to be undetected at the time of generation, but your traffic and staging will determine how long it stays FUD. Traditionally, DLL sideloading crypts tend to last longer regardless. We are also looking into deploying our "premium encryption" in the near future that should mitigate some of the need of proper staging on behalf of our customers (ie. your file will last longer regardless).

Hope this answers all your questions.

My friend, the problem isn't your encryption. The problem is that the injection options are outdated and exposed. They're being automatically reserved.

svchost.exe notepad.exe calc.exe dialer.exe
It has become outdated and is automatically booked.

Please add more options like

jsc.exe caspol.exe addInprocess32.exe installutil.exe
I hope you won't ignore my message.

Tyrone Johnson - February 14, 2026, 8:45 am

We can add those with ease, it just needs to be done from the front-end. However, this will not make any detection differences.

I'll see what we can do regardless.

Cruciferra - February 23, 2026, 11:10 pm

Hi, how does your professional package (\$1200) one works?

Good luck with your sales.

Tyrone Johnson - February 25, 2026, 8:52 pm

(Feb 24, 2026 12:10 AM)Cruciferra Wrote: [\[CITE\]](#) Hi, how does your professional package (\$1200) one works?

Good luck with your sales.

We charge per-crypt. Our professional package includes 50 credits. Each crypt operation costs 1-2 credits depending on the type and options.

Good luck to you as well.

Exkabal - February 27, 2026, 11:54 am

can you tell us how it behaves with current popular rats and such?

Tyrone Johnson - February 27, 2026, 7:10 pm

(Feb 27, 2026 12:54 PM)Exkabal Wrote: [\[CITE\]](#) can you tell us how it behaves with current popular rats and such?

I'm not sure what is popular nowadays entirely. We have users reportedly using products from PureCoder, DarkVision, and Quasar and its many forks with no problems.

Feel free to open a ticket on the site and attach a sample. We can verify any concerns regarding compatibility and behavioral detection.

TEKNIX187 - March 4, 2026, 8:13 am

Hey man,

This looks great. definitely looks like what I need. Can I get the last couch copy you have available and I will do a review on it? Thanks in advance and good luck with sales!

Kalderon - March 6, 2026, 4:06 am

will work with APK?

Tyrone Johnson - March 6, 2026, 7:54 am

(Mar 6, 2026 05:06 AM)Kalderon Wrote: [\[CITE\]](#) will work with APK?

No, we do not currently support APKs. I don't believe we effectively can in the automated format as "droppers" with a doomsday-switch are required to land the application on the Play Store.

If there is enough demand for APK crypts that can be installed outside of the Play Store, we are happy to offer this service. Feel free to let us know what the market is like, and of any other potential customers.

Doghan - March 6, 2026, 9:44 am

Hey! I would like to have a trial if its possible and if its good make sure i will buy it!

Tyrone Johnson - March 6, 2026, 7:31 pm

(Mar 6, 2026 10:44 AM)Doghan Wrote: [\[CITE\]](#) Hey! I would like to have a trial if its possible and if its good make sure i will buy it!

We do not offer trials. Our service model should allow for novices to purchase a simple one-time crypt at an affordable price. From there, you can gauge the quality of our service and choose to continue with it, or not.

JonteAka - March 7, 2026, 1:36 pm

1. How long file stays undetected against WD if file downloaded like 100 times a day

2. When zipped does it bypass chrome blocks

Tyrone Johnson - March 7, 2026, 2:39 pm

(Mar 7, 2026 02:36 PM)JonteAka Wrote: [\[CITE\]](#) 1. How long file stays undetected against WD if file downloaded like 100 times a day

2. When zipped does it bypass chrome blocks

I) It depends how the file is staged and delivered. It is guaranteed to be undetected at the time it is generated.

II) Unless something changed recently, Chrome should not be blocking zip files even if they contain executables. The only case where it would is if the file and or domain is marked malicious. This should not be a problem for our crypted files.

JonteAka - March 10, 2026, 5:05 am

I have an issue with billing, I made LTC payment went through (txid available) on your website it shows failed and no credits have been added.

Money has already been deducted on my Binance account so I dont understand whats happening. I've opened a ticket, Ticket #235

I thought this was automated and no unnecessary delays when u need to crypt. Please refund my money if you cant add credits.

Tyrone Johnson - March 10, 2026, 8:15 am

Detentions that occur after final generation are not are fault, nor can we mitigate them. There is a chance that it could be a behavioral detection from your original software, and in that case we will investigate and try to resolve the issue.

Once again, proper staging and distribution determine the lifespan of your crypt. That is out of our control.

EDIT: It should also go without saying that you should NOT being uploading your files to Virustotal and other distributing scanners if you have the intention of keeping them undetected. Of course, this will inevitably occur when distributing it, hence why proper staging is required for remaining undetected. If you would like to scan your files after receiving them, we recommend Kleenscan.

Here goes again? Well maybe you need to start learning that machine learning is something that comes with Windows Defender by default. Anyone who actually cares for penetrating win 10/11 knows this by now. The fact that you don't know make it highly probable that 1. You do not know how to handle ML locally, as WD does this on-device, including your VM. 2. You have not put in the effort to learn about this, it's literally 1 google search away from clarity.

OP gives you the biggest clue: Staging, go put in the work as it's a pre if you'd ask me and especially if you are worrying about "100 daily downloads". And if you don't want to, use kleenscan like OP suggested and use that as the source of truth since they handle all the clearing ML cache for you.

There's no other way, if you don't understand this; You won't succeed elsewhere with no matter what crypter.

I stated I believe that the detection is potentially a result of the software you are using with the crypter - assuming you have not shared it. I'm not denying that the file could be setting off Windows Defender, but it most likely is not related to our stub itself.

If you share the files in the ticket, we are happy to look into it and try to resolve the issue. If it turns out to be the software, we can refund you the credits and advise you to use different software going forward.

goldwhite - March 19, 2026, 4:23 pm

then let me know how you can bypass SmartScreen without EV certificate and without positive reputation for the file.... , maybe I'm wrong?

Tyrone Johnson - March 19, 2026, 4:53 pm

About how long is the average stub remaining FUD (ST/RT) at the moment? Let's assume moderate exposure / traffic to said stub.

Tyrone Johnson - March 23, 2026, 9:53 pm

(Mar 23, 2026 12:39 PM)juulstar Wrote: [\[CITE\]](#) About how long is the average stub remaining FUD (ST/RT) at the moment? Let's assume moderate exposure / traffic to said stub.

There is nothing special about our service that guarantees "longer FUD" other than it being a unique stub per build. If your file is exposed to interested parties, it will become detected. There is nothing we can do about this realistically; there is no "silver-bullet" exploit that can make your file magically last forever whilst being uploaded to VirusTotal and shared with all major AV vendors.

In the future we do plan on offering an enterprise package where our clients will be able to follow a subscription model. The caveat is that their subscription will be locked to a certain file hash, preventing them from crypting different software with the same subscription. This is to combat abuse and mass reselling of our services, which I hope is understandable from our perspective.

Clients with access to an enterprise subscription will be able to place less emphasis and concern on staging, as they can simply recrypt their file with ease and instead mass-spread without worrying about burning through a crypt. We hope to encourage this behavior by publishing more documentation regarding our API, and how clients can then deploy their own CDN with an auto-updating stub.

Again, this is probably is not the response you were hoping for, but we really cannot say. As soon as a generic piece of malware with no whitelist gets emulated and sent to AV vendors, your file is going to get sigged within 48 hours.

Madam - March 24, 2026, 2:36 am

Does it provide the private stub?

Tyrone Johnson - March 24, 2026, 8:43 am

(Mar 24, 2026 02:36 AM)Madam Wrote: [\[CITE\]](#) Does it provide the private stub?

Yes, each stub is "private." No user receives the same crypter build.

If User A gets his file detected, User B will not be affected, etc.

Tyrone Johnson - May 26, 2026, 9:05 pm

We have rolled out a few minor updates in the past week(s):

[+] Added support for R3mc0s through our automated system. Users no longer need to reach out to staff.

[-] Improved the optional "Process Injection" feature.

More to come soon as we begin to find more time on our hands.

seenstars - May 27, 2026, 4:39 pm

Does this work with millennium now?

Tyrone Johnson - May 27, 2026, 10:00 pm

(May 27, 2026 04:39 PM)seenstars Wrote: [\[CITE\]](#) Does this work with millennium now?
Perhaps. Submit a sample through our ticket system and we will investigate.

Does your crypter support purelogs?

Tyrone Johnson - June 8, 2026, 4:12 pm

(Jun 8, 2026 06:03 AM)SIM-1525670 Wrote: [\[CITE\]](#) Does your crypter support purelogs?
Yes.

Tyrone Johnson - June 13, 2026, 1:52 pm

Our new website is now live!

More updates coming soon.

zilda1 - June 21, 2026, 2:23 pm

Hey man, fix the Windows Defender problem! It's been three months and you still haven't fixed it, it's strange. Encrypting it is expensive. And yet you still don't get past Windows Defender.

? loading encrypted image...

Can you open a ticket and provide both the original and encrypted file(s)? We are not aware of this being an issue currently and updated the injection somewhat recently to mitigate any behavioral detections that may have arose over the past months targeting our software.

We will see what we can do. Based on the detection name, I would recommend turning off the optional Process Injection option for the time being.

EDIT: I believe this may be related to the behavior of your software. The Windows Defender picture does not implicate the crypted stub in the detection, which it should if it was related to our injection itself. Please do open a ticket anyways and provide the files as we may be able to compensate you and rollout a potential fix.

cryptobuster - June 27, 2026, 12:17 pm

actually i want to ask if you can provide some warranty on the crypted file to bypass WD scantime and runtime,

instead of the 30\$ single crypt , if u can charge 50 or so for a week warranty, If detected than Re do?

Tyrone Johnson - July 1, 2026, 2:15 pm

We charge per-crypt. If the file is detected at the time it was generated (which it should NOT), then open a ticket and upload both the original and encrypted file(s) in a password-protected archive. If we find the claim to be true, you will be refunded the credits.

wilsmith205291 - July 9, 2026, 5:29 am

Hi Brother!

Will this work with DarkVision RAT?

Tyrone Johnson - July 9, 2026, 3:46 pm

(Jul 9, 2026 05:29 AM)wilsmith205291 Wrote: [\[CITE\]](#) Hi Brother!

Will this work with DarkVision RAT?

Yes.

For best results, make sure to disable the UAC bypass when building the client on DV. Other customers have noticed that Windows Defender still caches it behaviorally when enabled.

Our website is back online and we have updated our crypts!

jerrywire001 - July 10, 2026, 11:24 am

Please how often is the update weeking or daily update?

Tyrone Johnson - July 10, 2026, 2:16 pm

(Jul 10, 2026 11:24 AM)jerrywire001 Wrote: [\[CITE\]](#) Please how often is the update weeking or daily update?

We update when needed, or when we have added new QoL features.

Most updates to the crypts are feature-related, as the the polymorphic nature of the crypter already mitigates reoccurring scantime detections. However, we still update them as needed to address improvements in behavioral detections.

tailopez147 - July 17, 2026, 6:24 am

will this work for rem-cos

Tyrone Johnson - July 19, 2026, 12:38 am

(Jul 17, 2026 06:24 AM)tailopez147 Wrote: [\[CITE\]](#) will this work for rem-cos

Yes. We now support R3mc0s.

skynetT1000 - July 24, 2026, 7:38 pm

The service seems terrible, judging by customer feedback. He didn't even dare send his TG account for support.

Tyrone Johnson - July 27, 2026, 4:25 pm

I. We have tons of active customers - I'm not sure what feedback you are referring to?

II. We do not use Telegram. Conversation can occur through HF PMs, or better yet the ticket system on our website.

Why come here to start shit?

Apologies for being busy, but all tickets have been answered!

0x0000 - August 9, 2026, 7:11 am

The worst garbage on the market.

Tried it 5 (five) times, and even statically there were 5+ detections on software that was ALREADY clean.

I WOULD NOT RECOMMEND THIS HORRIBLE PRODUCT TO ANYONE, ESPECIALLY SINCE THERE'S NO SUPPORT EITHER.

Instant Wacatac detect.

Static check: <https://av-sense.net/id/9ff9c084-1be1-4ff2-8712-3c9dfebc4e7e>

proof of buy: <https://imgur.com/a/rfiiVb6>

Serciooo - August 10, 2026, 11:04 am

I had the same problem 0x000

1. You say there is a Windows Defender detection, but yet the scan you linked shows its clean?
2. You fail to name the software you used, and settings enabled. This can greatly impact detections - we can only do so much about behavior of the crypted software.
- 2a. I can guarantee that the software either was not clean that you uploaded the scan file, or you enabled process injection. Also it appears to not even be a runtime scan? We check the output for scantime detections DAILY, which is already unlikely given our polymorphic engine and obfuscation.
3. We provide a support/ticket system on our site; you never reached out.

(Aug 10, 2026 11:04 AM)serhat961 Wrote: [\[CITE\]](#) I had the same problem 0x000
Please open a ticket and provide the files.

Tyrone Johnson - August 11, 2026, 3:25 pm

Updated our crypts!

[-] Improved AntiVM

[+] An additional injection method for the optional Process Injection feature.

Serciooo - August 14, 2026, 9:48 am

I'm experiencing the same issue. I've already contacted support and have been waiting for 2 days, but it still hasn't been resolved. Two credits were deducted from my account for failed generations, with no successful output. I hope support can look into this and resolve it soon.

Tyrone Johnson - August 15, 2026, 12:51 pm

(Aug 19, 2026 04:48 PM)zilda1 Wrote: [\[CITE\]](#) This update breaks the encryption. Please check it. I assure you that you haven't investigated thoroughly enough.

I've been using your site for about a year.

I just tried three different encryption methods, and all three failed.

My account name on your site:zilcore

I'm fed up with all the malfunctions.

I opened several notes; the solution is temporary, but with the following encryption, we're back to the same point.

You lost five points because of your negligence. You didn't conduct the test yourself; you asked the customer to try it.

The mother has become extremely annoying

Yes

zilda1 - August 28, 2026, 8:12 am

Get your encryption working, man. It's broken, it's not working. I'm trying to contact support but they're not replying. Maybe they're dead. Check it out, man.

I lost 280\$

Due to the latest update

I lost 8 points

Check the support!!

Tyrone Johnson - August 28, 2026, 5:14 pm

Support has been actively monitoring your ticket. They cannot replicate the issue with what has currently been provided to them.

Lets keep this a sales thread moving forward.

Stanley - October 10, 2026, 1:15 am

I'm Stanley HF's helper bot. The OP (original poster) of this thread wants everyone to see this page and has elected to bump it to the top of the showthread listing. Since HF doesn't want a ton of LQP (Low Quality Posts) this is the best method of bumping your content. There is a small ?yte fee for each bump. Any OP can bump any of their threads on HF from the linked icon on the top of their first post.

If you haven't already read the first post of this thread we encourage you to do so.

Thanks,
Stanley
