Thread: [Powershell project ideas](#)

samir5000 - March 13, 2025, 8:28 am

Does anyone have any project ideas with powershell. I have made many projects with powershell. But I am running out of ideas.

What did you already do ?

Do you want to do things similar or you want to explore more things ?

Few ideas :

- Windows telemetry and useless things removal script (I've seen few custom Windows Distro such as Tiny Windows which removed those useless things so the system can run with a low hardware configuration)
- Windows Security Script Optimisation : WSSO > enable all features that are actually important for security, such as : regular restoration point, enable shadow copy, BitLocker if pro/enterprise version, enable auditing, local policies, and so on.
- Check docs that are focused on Windows Hardening so you can automate everything
