You can try <https://hackforums.net/showthread.php?tid=6291651> or <https://hackforums.net/showthread.php?tid=6293117>. Bear in mind that any so-called 'UAC bypass' will not be FUD.

Is this your computer? I would caution you against doing anything stupid on a school or work computer.

There are a lot of tutorials on YT on how to bypass Windows password if you have physical access to the machine. However if it's something from work/school forget that, you'll get caught

There are different types of UAC bypasses, be careful if you are going to purchase one!

Most UAC bypasses work on admin accounts, less than a few work on limited accounts for multiple reasons.
