Thread: [Infect Windows devices on neighbours network](#)

**aerohacker** - March 27, 2025, 3:52 pm

I have access to neighbor wifi network and I can see how many and what devices they are running: Windows, Android and etc...

How can I infect or upload RAT server to computers/notebooks that are running Windows?!

**The Pact** - March 27, 2025, 6:27 pm

I would only want to do this if it would stop their dogs barking.

This is a n00bish question. You're not going to for a myriad of reasons, chief among them being that it's no longer 2017. Learn about network ports and sockets.

You've been a member much longer than I have, and you still don't know basic device exploitation? And does your neighbor know that you use his/her WiFi?
