Thread: [Looking for online game related hackers and cheaters, programmers](#)

facaigames - March 30, 2025, 11:22 pm

We focus on the field of online games, we need to have the following capabilities: game vulnerability exploitation, game data leakage, game currency production, game server penetration, administrator access, game currency manufacturing, and recruit programmers with game plug-in development capabilities. With thousands of mobile phones and computer devices, we have strong anti-tamper detection capabilities and can collaborate on projects. In addition, it is necessary to crack the game volume recharge, refund recovery and other services. Global cooperation scope (South Korea, the United States, Southeast Asia, etc.), support cross-regional game joint operations, zero risk, high returns, looking forward to working with you

??????,??????????,????????,??????????,??????
