Thread: [v20 Chrome Cookies](#)

**0ph4nim** - April 3, 2025, 12:11 pm

Any decryption method open source like python that anyone could make or link to me? Much appreciated!

DBSC- and ABE-encrypted cookies are difficult at best to decrypt, but you can find some projects if you look: <https://github.com/search?q=app-bound%20encryption&type=repositories>. Python, however, is, uh, non-ideal for Windows.

Alright so then most typical stealers these days just skip the v20's?

You asked for opensource, not expensive blackhat malware.

I have a stealer from python that can get all cookies from the chrome, edge,firefox, opera,...v.... browser

It's just having trouble with chrome password and I'll try to update in the next few days
