Thread: [r77 Rootkit](#)

aerohacker - April 5, 2025, 9:44 pm

Does anyone uses the r77 Rootkit?!

I download the same from official site, run the Installer like admin and everything that i use the prefix \$77, becomes hidden, I use the prefix on a software folder, and folder, files, process and everything related with the program is hidden from OS, what is excellent!

But the problem, that program don't run while invisible, and I want the two things, the program continues to run normally and hide everything related to it from the Windows.

I try to do manually with the configurator inside the regedit, but the \$77config key is hidden by the Rootkit.

Repeatedly asking the same question is not likely to get you an answer.

There are two totally different questions!

Just open and read, instead of comparing the threads...
