Thread: [Looking for cookie persistence and automation](#)

Money- - April 8, 2025, 5:52 pm

So the problem is now I need cookies to be persistence. Like session you know.

I have my own way currently using firefox multi containers but I want something that I can save to a text file and integrate it to my scripts.

The thing is ofcus they don't last and will expire later on but when it comes to firefox multi container extension they will preserve it and all.

But I needed to manually export the cookies 1 by 1, just need something I can automate it etc.

You know what I am looking for right? I am looking for ways to persist the cookie aka alternative ways.

I have a method I use myself currently.

If I got it right, you are looking to automate procces of saving cookies in text file.

Yea they need to be perserved once I reimport them , I think you need to set the expiration probaby.

I can automate the saving but more onto the persistence. The thing is now I am exporting the cookies via cookie editor as json and reimport back.

Like I want to export the cookie in json format and after 2-3 days and reimport it back via cookie editor to another browser but seems like the cookies will expire , i assume i need to set the expiration date of the cookies probably.

errewq2 - April 14, 2025, 1:38 am

depends of auth expire date. Sometimes it is possible to edit that. Text to me in telegram of here the website and let me play around it. If I get succeed I will give you method. If it works in your side then in the end you can pay me. I dont want upfront payment.

Well I am not aware of the website, but you need to keep refreshing them at the end it depends on the cookies type are they sessions token JWT etc...

If they are online they will last. I am using firefox multi container which persist the cookies forever whenever i open or close the browser.

But I want to reimport the cookies to be used on chrome later on you know. The site has a remember me feature for sure but still they expire after 2-3 days when I reimport them from txt files lol.

I think firefox multi container does this auto set cookie or refresh cookie when opened up and a new cookie or whatever is generated so I can't really save the cookies in a txt file to keep it 1-2 days if I wana close the browser or machine.

Unless I keep the browser or machine on , then definitely I can do this. Now while typing this I have an idea now. I will try it out later on.
