? Introducing VULNFIX — Community-Powered WAF Bypass & Real IP Discovery Tool

Hi everyone,

In my spare time, I've been building a lightweight yet powerful tool to assist both security researchers and site owners in identifying real IP addresses behind WAF (Web Application Firewall) protection layers like Cloudflare, Akamai, Incapsula, and Sucuri.

Due to DNS leaks, misconfigurations, or historical digital footprints, the true IP address of a server can sometimes still be discovered — and doing this manually is often time-consuming.

That's why I created VULNFIX.

It's fast. It's free. And it's designed for the community.

? Features

? Real IP Detection

SNI-based scanning
DNS leak analysis
CDN/IP fingerprinting

? Passive Subdomain Enumeration

? DNS Record Analysis

? Export Support (JSON & CSV)

? Tech Stack

Go (high-performance backend)
Vue.js (clean, responsive frontend)
PostgreSQL (robust data layer)

? Highlights

Up to 3 scans per day with no login
Unlimited scans with free user account
Currently in Beta – feedback is welcome!

? WAF Solutions Covered

Cloudflare
Akamai
Incapsula
Sucuri

? Try It Out

-> vulnfix.com

? Disclaimer:

This is not a commercial product.

VULNFIX is a community-driven initiative built for ethical testing and educational purposes.

Happy scanning — and stay secure!

Feel free to reach out for suggestions, feedback, or contributions. ???

Hello,

This is not doing anything other than searching for basic subdomains, i tried one akamai and one cf, it gave me mail server ip's lol.

sauce00 - November 17, 2025, 6:56 pm

can we get in touch on telegram I need your help
